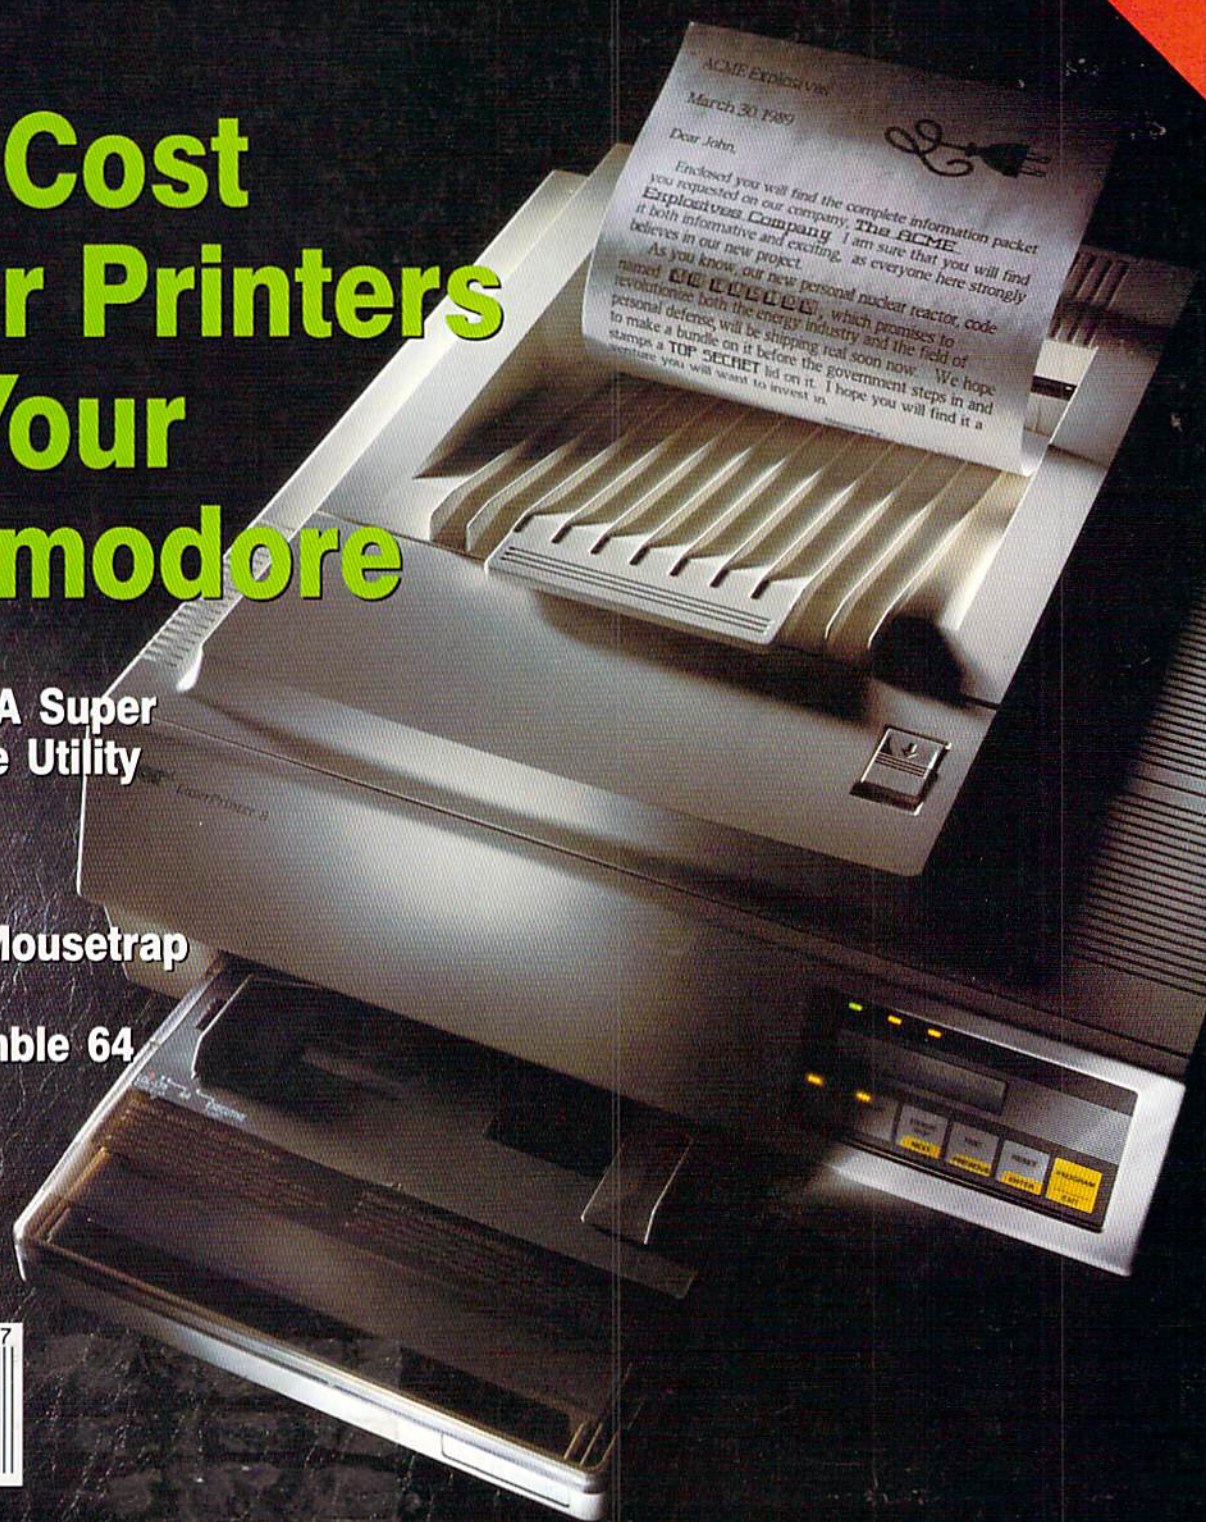
Low-Cost Laser Printers For Your Commodore



ACME Explosives
March 30 1989
Dear John,
Enclosed you will find the complete information packet you requested on our company, The ACME Explosives Company. I am sure that you will find it both informative and exciting, as everyone here strongly believes in our new project.
As you know, our new personal nuclear reactor, code named [redacted], which promises to revolutionize both the energy industry and the field of personal defense, will be shipping real soon now. We hope to make a bundle on it before the government steps in and stamps a TOP SECRET lid on it. I hope you will find it a venture you will want to invest in.

RUN Shell—A Super Disk-and-File Utility

Plus:

- A Better Mousetrap
- Cubix 128
- A-Z Scramble 64

BAAL

- ★ An addictive mixture of strategy and arcade action featuring:
- ★ 8 way ultra-smooth scrolling through 3 distinctive domains containing multiple levels.
- ★ Over 250 highly detailed screens, superb graphics and sound effects.
- ★ More than 100 monsters and 400 traps.

The future of the world lies in the hands of an elite squadron of men. YOU are the leader of the Time Warriors. Can you save the earth from the evil BAAL?

His army of undead have stolen an awesom weapon of destruction, a War Machine.

As leader of the ultimate battle fighters, your quest is to invade BAAL's domain, fighting off his monstrous demonic beasts to retrieve the War Machine . . . but . . . you must kill BAAL in the process.

Can you succeed? There is no option . . . the alternative is literally 'Hell on Earth'.

Screen Shots from the Atari ST version

AVAILABLE NOW ON THE PSYCLAPSE LABEL

CAPTAIN FIZZ
Meets The Blaster-Trons

The message is simple: co-operate or die!

It's double fun and double trouble all the way in Captain Fizz, the most exciting simultaneous two-player game you and a friend are ever likely to play. It's a whole new world of split-screen, high-speed action, as both of you take on the nasty Blaster-Trons infesting the planet Icarus.

Yup, it's a tough mission alright, but you might just win out with the right blend of co-operation, courage, laser-hot reflexes, tactical sense. . . and brains. The action is fast and furious in Captain Fizz, but if you can't work out the right tactics you'll both be dead meat.

There are 22 levels of savage and relentless action to battle through before you reach your objective, the central computer that's causing the evil infestation. You'll never get there, though, unless you put your heads together and co-operate; your buddy can't do it on his own, and neither can you. This is one program where even the easy games are hard. So remember — united you stand, but divided you fall. . .

Warning: this game is impossible to beat on your own.

Two joysticks required for two-player game.

Screen shots taken from the Atari ST version

AVAILABLE NOW ON THE PSYCLAPSE LABEL

BALLISTIX
Its a whole new ball game!

Sick of silly old soccer ? Tired of pathetic pinball? Then you need a dose of *Ballistix* - the fastest, wackiest, toughest ball game yet to appear on a computer. *Ballistix* just explodes with excitement, puzzles and an amazing **130 different screens** of frenetic action.

The aim of the game is simple; score more goals than your opponent to win the match. Doing it is a different matter as **splitters** fill the screen with dozens of balls, **tunnels** hide them from view, **bumpers** bounce balls all over the show, fiendish **red arrows** speed them up to almost impossible velocity, **magnets** pull them away from your control, and much, much more.

Ballistix is incredibly flexible, too. You can play against the computer or another player, set the speed if you can't stand the pace, define where the balls are fired and their velocity, rack up bonuses that will get you extra goals and then, at the end of an exhausting game, set your name in pride of place on the high-score table. And it's all played to the accompaniment of a throbbing sound-track and a crowd that applauds your every goal.

Ballistix is definitely not a game for wimps. It's tough, fast, challenging and incredibly competitive - in fact, it's just the kind of game you like.

Two joysticks required for two-player game

We turn Commodore® Owners into Commodore Users. For only $6.65 a month.

Loadstar™ **is a monthly two-disk collection of valuable software for your Commodore 64 or Commodore 128.**

Learn from the Experts!

Draw on the vast experience of our software editors to provide for you each month carefully-selected programs which you can use productively...from spreadsheets to accounting programs, from role-playing games to recipe programs, from home office to telecommunications programs. Using clearly-written documentation, you will master each new application with ease and confidence.

Become Experienced *Inexpensively!*

Without your investing a fortune, ***Loadstar*** will quickly demonstrate to you the full power and versatility of your Commodore. With its wide range of software, you will learn more about the capabilities of your computer than you ever thought possible. At only $6.65 a month, ***Loadstar*** is your best software value!

Try *Loadstar* for Three Months!

Each month the latest issue of ***Loadstar*** will be delivered to your door on *two* unprotected 5¼" disks. Each disk is filled with great software, including utilities, games, home and business applications, and educational programs. Order now and receive **The Best of *Loadstar*, Vol. 4** absolutely *free!*

Subscribers Love *Loadstar!*

"Thanks much for an excellent product at the most reasonable price around...Your integrity, honest advertising, and value for price paid are, in a word, astounding!"

—R.P., Spokane, Washington

Contents of Issue #58*

- **The Red Obelisk**—A colorful space mining game for the dedicated strategist.
- **Lunar Calendar**—Discover the moon's phases.
- **Snigglefritz**—An entertaining one- or two-player arithmetic game.
- **Murder One**—Solve the mysteries in four intriguing whodunits.
- **Oscar Party**—Outguess the Academy on their big night.
- **Sprite On!**—Link sprites together and animate them, too!
- **Print Shop® Borders**—Twenty-eight borders for your collection.

Plus more programs and features!

*Available as a back issue

Available at Waldenbooks, B. Dalton Booksellers, and fine bookstores everywhere at a cover price of $9.95.
Commodore 64 and Commodore 128 are registered trademarks of Commodore Electronics, Ltd.
Print Shop is a registered trademark of Brøderbund Software.

FREE!

The Best of *Loadstar*, Vol. 4 when you place an order for the next three issues of ***Loadstar*** for your Commodore 64/128! This two-sided bonus disk includes:

- **File Viewer**—A tool for reading and printing SEQuential files.
- **Star Terminal**—A deluxe 300 or 1200 baud modem program.
- **Banner**—Create exciting signs and banners with your C-64!
- **Zorphon**—A fast-paced space arcade game.

...***plus*** ten more programs and features!

Your Satisfaction Guaranteed!

If for any reason you are not satisfied with your purchase, return your first issue for a full $19.95 refund. **The Best of *Loadstar*, Vol.4** is yours to keep. You just can't lose!

YES!

Please rush my free **The Best of *Loadstar*, Vol. 4** and start my three-month subscription to ***Loadstar*** for my C64/128 for only $19.95 postage paid. I understand that this offer is a **trial subscription** and that I am under no obligation to continue beyond three months. *Canada/Mexico $24.95 • Overseas $27.95 • LA residents add 4% sales tax.*

FEATURES

19 A DYNAMITE COMBO! *by Lou Wallace*
Arm yourself with the proper information before you buy a laser printer; then read on for a review of three affordable machines.

23 TWO LOW-COST ALTERNATIVES *by Loren Lovhaug*
Two good, discontinued but still obtainable laser printers may be your economical answer.

26 RUN SHELL* *by John Ryan*
Now you can do everything with your 1541, 1571 or 1581 disk drive, from renaming and scratching files to copying files and disks.

30 A-Z SCRAMBLE* *by Brian Melcher*
Alphabetize a grid of four to 64 random letters in as few moves as possible. It's great fun, and a learning experience for kids. A C-64 educational/strategy game for one to five players.

32 CUBIX 1* *by Leonard Morris*
Try building a three-units-on-an-edge cube out of six pieces that are formed of either four or five small cubes. A real challenge for your skill at spatial relationships.

36 A BETTER MOUSETRAP* *by Tom Brown*
Here's a program enabling you to use a joystick and a proportional mouse at the same time with your C-64 or 128.

RUNning Ruminations

The alliterative former vice-president Spiro T. Agnew once referred to some members of my generation as "nattering nabobs of negativism." This phrase, uttered almost 20 years ago, applies to some members of today's Commodore computer generation who whine about the apparent decline in the market.

Granted, the times they are a changin'. We've witnessed yet another management shakeup at Commodore, and rumors persist about new "replacement" machines coming out of Commodore. But, instead of prematurely planning for the demise of the 64/128 computers, support groups—dealers, manufacturers, user groups, magazines—should be concentrating on how they can fulfill the needs of the current market.

Today's market presents challenges. . . and opportunities.

Instead of knocking the Commodore eight-bit market, I prefer to focus on the positive challenges that we face. There is an opportunity here for the Commodore community to rededicate itself to supporting and offering assistance to users to help them learn more about and do more with their computers.

At *RUN* during the past few months, we've noticed a dramatic increase in the number of phone calls and letters from information seekers—particularly new users—asking for sources of software and hardware and about Commodore computer use in general.

RUN recently introduced a new GEOS disk that has met with rave comments—from "It does exactly what you hope it will" to "just what the doc ordered." In the coming months, we will introduce several more disk ideas that, we hope, will breathe new life into the market.

Far from giving up on the market, we see an opportunity here to serve—through the magazine and special disk products—needs that aren't being met. As long as enough people remain interested in the 64 and 128, *RUN* remains dedicated and will continue to meet the needs of its readers. I challenge other support groups to identify needs and introduce products that serve those needs.

The Commodore market is unlike one we have ever seen. Referring to the explosive C-64 market, industry pundits said it couldn't last—that was almost five years ago! Commodore has made a name for itself over the years for quality computing at low cost. Their C-64 represents the most popular, low-end computer in the market. I see no evidence that this will change.

If the market begins to dry up, we'll know it—not from any sales statements from Commodore or speculation in the press—but from the user community. The 64/128 market is *not* over until you, the user, say so. Until the last Commodore user unplugs his power supply, there's life in the market.

The fact is that Commodore continues to churn out computers; people continue to buy them; users continue to purchase software and peripherals for their machines; and they continue to need support groups. With its large installed user base, the Commodore market won't die quickly. Its millions of users won't let it.

Dennis Brisson
Editor-in-Chief

Magic Johnson's BASKETBALL

Basketball the way the Pros play.

Arcade action brings the realism of the big time game home to you in this direct translation of the popular coin-op arcade game, "Magic Johnson's Fastbreak Basketball."

Featuring

- Arcade-quality animated graphics and characters larger than any before seen in an IBM basketball game
- a full-court scrolling screen
- two-on-two play, WITH OFFICIALS!
- full stats – see if you can achieve Triple Doubles like Magic!
- a unique training sequence not even found in the Arcade game-Magic teaches you to make the shots

Make the "jump shot," the "alley oop," the "pick 'n roll," and of course Magic's famous fast break with a "slam dunk" finish. Dribble 'round your opponent to make the "lay up" that wins the game!

Now you've gained the honor of playing the ultimate One-on-One . . .

You against Magic Johnson.

Available now:	IBM 5-¼"	– $39.99
	IBM 3-½"	– $39.99

$537 C-64 Spiral Screen Clear

In my search for different ways of clearing the C-64's screen, I wrote Spiral Clear. This interrupt-driven utility can stay in memory until you need it. Then just type in SYS 49152 in Program or Direct mode to run it. The C-64's text screen is cleared of text in a spiral motion beginning at the screen's home position. The program is fully relocatable, so you may use it with other machine language utilities.

$538 Hi-Speed SEQ File Reader 128

My Hi-Speed Sequential File Reader for the C-128 uses a machine language routine to read a file from disk and display it on the screen. You can freeze the screen at any point with the no-scroll key and abort the program with the run-stop key.

The program must be typed in as listed here, with no line renumbering or changes in syntax, and it must be reloaded from disk and run each time you use it.

```

—JOHN T. REYNOLDS, FORT WALTON BEACH, FL

$53A Static-Guard

Here at the *RUN* editorial offices, carpeting generates static electricity, particularly in the winter months when the air is dry. When we received one of the first 64Cs to come off the Commodore assembly lines, an editor reached for the on/off switch by feel and—zap!—a static discharge entered one of the joystick ports and fried *all* the internals. The computer was totally useless and needed repair. Now, when the user ports are not in use, we cover them with a three-inch length of electrical tape. To protect the pins from tape glue, we attach a two-inch length of paper to the glue side of the tape before affixing it to the user ports.

$53C GRAPHIC MAGIC

You can design sprites on the glass of your video monitor with dry-erase markers, which you can buy at any art supply store. Then use your graphic program and mouse, joystick or keyboard to trace the graphic beneath the sketch drawn on the screen.

When you're done, wipe the drawing off the screen with a dry cloth, then add the finishing touches to the detail. You'll find that creating sprites this way is much easier and less time-consuming.

—JONATHAN LEINONEN, COVINGTON, MI

$53D PROGRAMMING THE C-128'S ALT KEY

My program, ALT Key, peeks location 211 to detect when the ALT key is pressed. Using this program and the ALT key with a function key, or with a combination of function and shift keys, allows clever programmers to create 16 function keys.

$53E SNAKES ALIVE!

While experimenting with the C-128's 40-Column-mode line-drawing commands, I created a wiggling, squiggling series of lines. With a little refinement, I made an animated snake.

Snakes Alive! has the potential for various applications in C-128 games. Since it is not a sprite, it can operate independently of sprite commands. Experiment with the program to create your own customized snake.

```

RUN *pays $10 to $40 for each trick published in the column. If you'd like a copy of the latest edition of* RUN's *Magic Trick Writer's Guide, send your request with a self-addressed, stamped, business-size envelope; you'll receive a copy in two or three weeks.*

RUN W·O·R·K·S

Full 64 and 128 Mode Support!

Productivity Software with a Creative Advantage

RUN Works, a new dimension to productivity software, giving you top quality programs at an economical price! Best of all, **RUN Works is fully C-64 and C-128 compatible!**

Money Manager. Have you ever wondered where your money goes each month? Then Money Manager is for you! This personal budget and record-keeping system will allow you to keep track of your income and expenses. . . so you can stay within your budget!

RUN Term. Nearly half of all Commodore users own modems. *RUN*'s user friendly RUN Term reveals the exciting world of BBSs, on-line networks and information exchanges. With advanced features like 300/1200 Baud support, autodialing, ASCII capture of text, XModem and Punter protocols and much more.

Label Base. Most people need to produce address labels in large quantities from time-to-time, and using your Commodore and printer makes the job quick and efficient. Label Base makes this time-consuming chore a snap.

Form Writer. This program lets you design and print letters, invoices, surveys, or any other kind of form for your small business or home application. Great for school projects too!

RUN Paint. This full-featured paint and draw program has more drawing options and tools than most commercial packages, plus it offers compatibility with the popular Doodle! and Koala graphic formats. Professionals and amateurs alike will find this a fantastic tool for computer art.

RUN PAINT

RUN Shell. This powerful disk utility lets 1541, 1571 and 1581 users access, maintain and manipulate files with ease. It's a menu-driven disk manager that makes erasing, renaming or copying files or disks as easy as the press of a key. Plus a whole lot more!

Graphmaker. A graph-lover's delight! Generate beautiful charts and graphs of your custom data sets for analysis and impressive presentation.

Satisfaction Guarantee: Use **RUN Works** for a full 30 days. If it doesn't satisfy your productivity needs, simply return the disk and fully illustrated documentation book for a complete refund!

NEWS AND NEW PRODUCTS

Posters, a weather database and the RUN Special Issue *contest winner make this month's column hotter than July.*

Compiled by HAROLD R. BJORNSEN

RUN SPECIAL ISSUE WINNER!

YORK, PA—Congratulations to **Norman Abramson** of York, Pennsylvania. He was selected as the grand prize winner in the *RUN Special Issue* giveaway contest.

When contacted, Abramson was incredulous. "I can't believe it. I've never won anything before in my life."

As the winner of the contest, Abramson will receive a complete 128D system, including a 1084 monitor, 1750 RAM expander ("Where did you get one of those?" he asked), 1581 disk drive, color printer, 1351 mouse, 1670 modem and an assortment of *RUN* productivity software. Total value is over $1400.

Abramson, a long-time *RUN* reader and Commodore user, operates a bulletin board system with his 128D computer and also uses his system for word processing and other home applications. His six-year-old son uses his dad's system to practice his typing and spelling skills.

We extend our congratulations to the Abramson family and our appreciation to the thousands of *RUN* readers who entered the contest.

POSTER ROSTER

KUTZTOWN, PA—Free Spirit Software (PO Box 128, Kutztown, PA 19530) has released **Poster Maker 128** for the C-128. The package lets you design and print out posters of various sizes and save your creations to disk. Included is a utility for reducing the size of graphics to create clip art. A 64K video RAM upgrade, a 1351 or compatible mouse and a 1571 disk drive are required. It's available for $29.95.

Check Reader Service number 401.

SOCK 'ER TO 'EM

HUNT VALLEY, MD—**Keith Van Eron's Pro Soccer**, a game for the C-64, follows the action from an overhead point of view. Constant vertical and horizontal scrolling ensure that the ball and the players around it never leave the screen. A wide variety of shots is allowed, including a "banana" shot, which curves over and around defenders, and a Pele-style backwards overhead kick.

MicroProse's Pro Soccer has a slow-motion, instant replay feature that lets you see critical moments leading up to a goal.

Also, Pro Soccer includes both indoor and outdoor games. The indoor game features rebounds off the boards and gives players the opportunity to play a Major Indoor Soccer League schedule. In the outdoor game, a weather option lets you produce high winds and wet turf to create havoc for the ball footlers. $34.95. MicroProse, 120 Lakefront Drive, Hunt Valley, MD 21030.

Check Reader Service number 402.

LOOKS JUST LIKE KEENE, NEW HAMPSHIRE!

SUNNYVALE, CA—**Hometown, USA**, a creativity/learning software package from Publishing International (333 West El Camino Real, Suite 222, Sunnyvale, CA 94087) is available for the C-64. The package includes a series of plans for model buildings (houses, store, church, railway station, bakery, hotel, gazebo, bank, garage, grocery, library, gas station and theater) from a typical small American town. The buildings may be as simple or complex as the user desires, and can be designed from the software and built by hand by children and adults. When finishing assembly, the models may be used as decorations for Christmas (under the tree or as ornaments), with train sets, or as gift boxes. Accessories include windows, doors, signs and store fronts. $39.95.

Check Reader Service number 407.

PREDICT THE FUTURE

PLEASANTVILLE, NY—Sunburst Communications (Pleasantville, NY 10570) has released a C-64 database program for use in the classroom. **Climate and Weather** contains databases that provide climatic information for 62 weather stations in the United States and 72 others around the world. It also has a starter database in which students may record information about local weather. To gain an understanding of weather patterns, students assume the role of employees of a travel and relocation agency. As the "employees" answer letters from clients, they form inferences and test generalizations about world climate patterns while solving problems related to their clients' climatic needs. $59.

Check Reader Service number 403.

FORMAT EXECUTIVE, V4.0

BRADENTON, FL—Powersoft (PO Box 7333, Bradenton, FL 34210) has released **Format Executive**, version 4.0, a format conversion program for the C-128. It allows the computer with a 1571 or 1581 disk drive to read, write and format over 150 3½- or 5¼-inch, MS-DOS, CP/M-80, CP/M-86, Commodore CP/M and Commodore DOS disk formats. The accompanying manual shows how to use the program to transfer files from other computers, such as the Commodore Amiga, Atari ST and the Apple Macintosh. Features of Format Executive include "burst" file-transfer technique; file transfers between all formats; conversion from Commodore PETASCII to true ASCII; linefeed adjustment; wild-card support; single, dual, multiple, RAM-disk and hard-drive support; and 1581 partition support. It's available for $59.95.

SOFTWARE GALLERY

July reviews include the snap, crackle and pop of war games and the red, white and blue of sports simulations!

Compiled by BETH S. JALA

STAR WARS ..... B+

May the Force Be With You

Just as Hollywood is not reluctant about borrowing from its past, software companies have also begun releasing remakes. Star Wars, an update of a 1984 Parker Brothers C-64 cartridge, is one of the first.

Both the hit film and a coin-op contest are the inspirations for the current program. In it, you assume the role of Luke Skywalker, who faces three challenges.

The first is a deep-space dogfight near the evil empire's Death Star. You must eliminate the enemy TIE fighters that defend the interstellar dreadnought, and you must also survive their barrage of deadly fireballs.

The second game sequence takes place on the Death Star's surface, which bristles with laser towers. Here you must destroy their lethal energy bolts while attempting to blast away their tops.

In the third software segment, Luke dives into the Equatorial Trench that runs across the enemy vessel. The hazards in this area are more fireballs and catwalks, which can only be avoided by precision flying. Your goal is to find and shoot the ship's exhaust port and cause the Death Star to explode. If you successfully bring about the "big bang," it's on to the next, more difficult level.

The Broderbund program is far superior to the 1984 game in a number of ways. For instance, the colorful new graphics are more spectacular, greatly enhancing the excitement. The fluid control system and the sound of the current version also surpass those of the original. Another clever addition is a sound-chip device on the box that, when pressed, plays the movie's theme.

However, no matter how much it is embellished, Star Wars still remains a product of the early 80s. And, like most space shoot-'em-ups from that period, it is basically a test of reflexes and stamina. So, players who prefer exercising their gray matter may find little of interest in Skywalker's exploits.

Nonetheless, arcade warriors who enjoy traditional cosmic confrontations will love the new Star Wars. With its cinema, coin-op and C-64 forebears, its illustrious fast-action pedigree outshines that of any other home computer game. *(Broderbund Software, Inc., 17 Paul Drive, San Rafael, CA 94903. C-64/$29.95.)*

REPORT CARD

A Superb!
An exceptional program that outshines all others.

B Good.
One of the better programs available in its category. A worthy addition to your software library.

C Average.
Lives up to its billing. No major hassles or disappointments here.

D Poor.
This program has some problems. There are better on the market.

E Failure.
Many problems; should be deep-sixed!

HOLIDAYS AND SEASONS ..... B–

Choose Your Colors
For Christmas, Easter
And Other Special Events!

What would happen if you took a children's coloring book and transformed it into a program for the C-64? Chances are good that you'd come up with something very close to Polarware's Electric Crayon series. The Holidays and Seasons edition includes pictures for lots of holidays and "major" events.

Loading the program takes a long time, especially with a 1541 disk drive. Since the program is suggested for youngsters of age three or older, you might want to load it before children sit down at the computer, or they'll become bored before they even begin.

The operation is very simple, with movement controlled via mouse, joystick or keyboard. What you see on the screen is an outlined picture that's almost identical to what you'd find in a traditional paperback coloring book. In the lower right-hand corner are the colors from which you select one of 16 "crayons." You can also mix colors.

Anyone who has used a multi-featured drawing program is probably familiar with the Fill command. Holidays and Seasons works on the same premise: You move the pointer, which looks like a crayon, to the area you wish to color and press the button. Everything enclosed within that area becomes that color.

The mouse activates the pointer smoothly, but slowly. This is irritating to me, but younger users might find it an advantage, because it makes it easy for them to pinpoint an area to work on.

As to printouts, the program supports—and the package, to Polarware's credit, is so marked—only the Okimate 20 or Commodore 1200. Unless you own the Okimate, a color printer, you probably won't find the printing features very helpful. You can, of course, use a Commodore 1200 to print the ►

pictures in black and white and then color them in by hand, but in that case a book would be considerably cheaper. I was unsuccessful in making it work with the other printers I own.

Holidays and Seasons does have a variety of options. You can print a picture alone or with a calendar. You can add a pre-programmed description to the picture or create your own message. The picture can also be printed sideways rather than vertically. Finally, you can turn the picture into a banner and include a message. (Note: The instructions warn that printing banners with an Okimate 20 will use almost an entire ribbon!) Stickers are included to enhance the final product.

Overall, Holidays and Seasons works as advertised. If you want to expose young children to computer graphics, give this program some serious consideration. If you're thinking about purchasing it for an older child or yourself, I suggest you consider one of the many

Birthdays and other events become even more special with Holidays and Seasons.

other drawing programs available, especially one with special applications that let you create and color cartoon characters. *(Polarware, Inc., 1055 Paramount Parkway, Suite A, Batavia, IL 60510. C-64/$29.95.)*

JACK NICKLAUS' GREATEST EIGHTEEN HOLES OF MAJOR CHAMPIONSHIP GOLF ..... C+

The Golden Bear
Lends His Name
To This Sport on Disk

Accolade has finally added golf to their list of C-64 sports simulations. However, despite a gallant effort, this

Can you compete with Jack Nicklaus on his Greatest 18 Holes of Major Championship Golf?

game doesn't live up to the standards set by other Accolade sports titles.

Greatest Eighteen lets you play on three different golf courses. The first is an imaginary course consisting of holes selected from 18 of Jack's favorite courses in the U.S. and the British Isles. The other two simulate real courses that Nicklaus actually designed—Castle Pines Golf Club at Castle Rock, Colorado, and the Golf Club at Desert Mountain, in Scottsdale, Arizona.

You can play a Skins game, where individual holes pay specific dollar amounts, or you can compete for the lowest overall score after 18 holes. Up to four players can tee off, and there are even eight different computer opponents of varying skill (including J. N. himself) who you can call upon for competition. Each player has a choice of a male or female on-screen golfer, two skill levels and three tees (Pro, Men's and Ladies'). Other options let you adjust the prize money, practice individual holes or train on the driving range.

When you play at the Expert level, Greatest Eighteen lets you choose your own club from an assortment of one driver, two woods, eight irons, two wedges and a putter. A power bar lets you control the strength of your shot and the amount of hook or slice. In addition, gauges that indicate wind speed and direction or the break of the green are displayed so that golfers can compensate.

Unfortunately, three aspects of the Greatest Eighteen make it disappointing. First, the animation of your golfer is spoiled by an inexplicable pause right in the middle of his stroke. To be honest, this is more noticeable when you're watching someone play than when you're making the shot yourself, but it is disconcerting. Second, the graphics of the fairways are unimpressive, with different areas separated by blocky, jagged lines. Finally, the program includes an identification sheet printed with black ink on dark red paper. I realize that this color combination is used to prevent photocopying, but there are better ways of protecting a program, and while there are many Accolade programs I'd risk my eyesight for, Greatest Eighteen isn't one of them. *(Accolade, 550 S. Winchester Blvd., Suite 200, San Jose, CA 95128. C-64/$29.95.)*

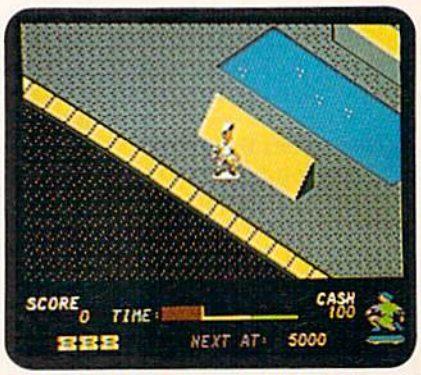
SOUTH BOSTON, MA

720° ..... B

Outrageous Stunts
And the Hottest
Skateboarding Equipment!

I won't be doing much skateboarding in the near future; the broken leg that



Score points and win cash with radical skateboarding moves in 720°.

I'm recuperating from guarantees that. But at least I have Mindscape's 720°, which lets me fantasize about all sorts of astounding feats on four flashing wheels.

Adapted from a coin-op program, this one-player C-64 game supports either a joystick or the keyboard and has four difficulty levels. Each begins in the Main Park, where runaway cars, disc-throwing thugs and other dangers threaten to make you eat concrete.

At the Park's edges are entrances to four events. While the slalom challenges you with an obstacle course of flags, the downhill contest is packed with twists and turns on a track built upon stilts. In the jump event, you time your take-offs to avoid water hazards and to land on bonus targets. And you strut your stuff with some amazing spins, slides and handstands on the U-shaped free-style ramp.

Performing well in the contests earns medals, points and even cash, which can be spent in shops that sell the latest equipment. With hot new boards, skates, shoes and helmets, you race faster, fly higher and recover more quickly from spills and collisions.

More important than money is your point total, which determines how far in the game you can go. Aside from doing well in the contests, you can increase your score with stunts like the incredible 720, which is four complete airborne turns. The Main Park is littered with ramps and other structures that serve as launching pads for your spectacular tricks.

Time is also vital in 720°, since there are deadlines for skating from one event to another. If you miss them, a swarm of killer bees materializes to steal one of your three lives.

However, the deadlines and bees were both accidentally omitted from the first batch of disks that the manufacturer shipped. If you bought one of these software packages and wish to receive a replacement, Mindscape will furnish one at no charge. But be advised that the corrected version is more difficult than the original.

About the only other problem with the program is the relatively long pause that occurs as each event is brought to the screen. Even with a software accelerator, these waits can be almost as long as the contests themselves.

But neither the game's graphics nor its sound can be faulted, and best of all is the excellent animation. I give it full credit for turning me into a skateboarding champ, if only through an on-screen surrogate. *(Mindscape, Inc., 3444 Dundee Rd., Northbrook, IL 60062. C-64/$29.95.)*

OAK PARK, IL

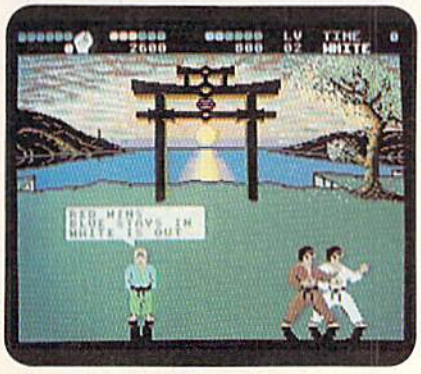
CHOP 'N' DROP ..... B–

Everybody was Kung-Fu Fighting!

Mediagenic bills Chop 'n' Drop as a derivative of Karate Champ, a popular Data East title from the mid-1980s. Both programs share a number of characteristics: similar control systems and methods of assigning points; use of bonus challenges and the 30-second clock; and the presence of an on-screen referee. Chop 'n' Drop, however, is no clone of its older cousin. In most ways, it is a definite improvement over the original.

In this game, you can battle two computer opponents simultaneously; or, you and a friend can go against each other and a computer foe. When one person dies, the computer takes his or her place. In that way, the survivor continues battling two others, which makes Chop 'n' Drop more complex, interesting and enjoyable than Karate Champ.

In both games, 16 possible actions can be accessed via joystick input. A variety of kicks and punches are the primary attack movements. My favorite offensive ploy—the head butt—is only available in Chop 'n' Drop. Also, joystick response is quicker and more accurate in the newer game.



Employing a variety of karate kicks and punches helps you move into the black belt ranks in Chop 'n' Drop.

Sixteen possible options might be a dozen too many for the average player to remember, however. Using the same handful of offensive moves might prove effective in lower levels, but survival becomes problematic for the novice warrior when opponents begin employing sophisticated move combinations.

Winning a combat round requires making a certain number of hits. If you can achieve these before the allotted 30 seconds run out, you're awarded bonus points. You're eliminated if you're not in second place when an enemy wins the round, no matter how well you did in previous levels.

Every third level is a bonus round, where you're given a shield that deflects bouncing balls coming from both directions, but what this activity has to do with karate is beyond me. Furthermore, it's nearly as difficult and even more frustrating than the main challenge.

Chop 'n' Drop comes close to being arcade quality because of its sharply etched figures, graceful and fluid animation and realistic sound effects. Unlike Karate Champ, which offered different graphic scenes from level to level, Chop 'n' Drop's background remains the same. Successfully completing new levels is not as much fun without this incentive.

By way of compensation, a player can move all the way up the ranks from white to black belt by scoring certain numbers of points. High scores and rankings, unfortunately, can't be saved to disk. Your adversaries gain in skill over the course of the game's 25 levels, so it's difficult to accumulate points and stay alive. A record of your successes and the ability to restart the game at the most recently attained level would make this game more appealing.

Chop 'n' Drop offers nothing revolutionary in game play; however, for fans of martial arts contests, it should prove a worthy diversion. *(Activision; distributed by Mediagenic, 3885 Bohannon Drive, Menlo Park, CA 94025. C-64/$29.95.)*

SYRACUSE, NY

DOUBLE DRAGON ..... C+

Commodore

Kung-Fu Combat

This translation of a very popular coin-op doesn't differ much from the multitude of martial arts simulations that preceded it. The idea behind most of them is simple: kick butt or get kicked.

Double Dragon's main distinction is that it can be played simultaneously with a friend. In that respect, it's definitely an improvement over the others.

The story line is rather unexceptional. The premise is that Billy Lee, and his twin brother Jimmy, must find Billy's girlfriend, who has been kidnapped by a local street gang. They must first defeat, through hand-to-hand combat, the gang members who are determined to stop them from searching the city.

The search takes place on a monitor screen that scrolls horizontally from one part of the city to the next. Billy and Jimmy can't run away from trouble because the screen won't scroll until all opponents on it are defeated. They can, however, circle around it. The brothers can move up, down, left or right or jump in one of three directions. This is an improvement over some martial arts games where the protagonists can only move left or right.

But, since all of the movements and fighting techniques are controlled by joystick, there are fewer fighting techniques to choose from than some other ►

martial arts games. Billy and Jimmy are supposed to have six techniques to choose from, but no matter how hard I tried, I couldn't get either of them to throw a whirlwind kick.

Other than that, joystick response is fairly good. It's easy to throw a kick, punch or head butt. It's not as easy, however, to see exactly what technique worked, because the animation and graphics are not particularly good.

Although the foes change and their weapons vary, it seems as though the same fighting techniques are effective on all opponents. Yet the twins take so much punishment that it's difficult to advance beyond the first one or two of five possible city-street scenarios.

Unfortunately, there's no provision in Double Dragon for beginning a new game where the old one ended. I think it's about time software designers started making that option standard in all coin-op translations. It is, after all, one way in which the home version could be better than the arcade original. Another option that's lacking and should be standard fare is the ability to save high scores to disk as a permanent record.

On the plus side, like most good arcade translations, Double Dragon is simple enough to begin playing right away, yet challenging enough to make you come back for more. You always think you can do better than the last time, and it's nice not to have to sink any quarters into a coin box to prove yourself wrong. *(Arcadia; distributed by Electronic Arts, 1820 Gateway Drive, San Mateo, CA 94404. C-64/$34.99.)*

—SCOTT WASSER
WILKES-BARRE, PA

CONTRA ..... A+

This game is not a political statement about the situation in Central America. It's a science-fiction battle in which you become a commando who desperately strives against the Red Falcon. You attack this cruel alien at his jungle base, where there are three-dimensional mazes, underground security systems and tropical forests surrounded by giant waterfalls and cannons from another world. Unless you survive these killing zones and vanquish the vile war monger, his hordes of ruthless soldiers will swarm forth to conquer the globe with extraterrestrial weapons.

You begin with a rifle and three lives. You earn more powerful armament by shooting and capturing falcon symbols, which hold lasers, force fields and other power-ups. You gain an additional life whenever you blast your way through one of the game's defense perimeters.

Although it has a two-player option, Contra is most suitable for one-person play. Fortunately, Konami's programmers included a pause button, which lets you rest—and you'll need it! Contra creates a level of excitement that's both exhilarating and tiring, with each of the game's components contributing to an atmosphere of desperate warfare.

The graphics are excellent, beautifully depicting both the primitive and the futuristic hazards you face. The pounding beat of the background music spurs you on to a frenzied pace. Most compelling is the game's animation: figures and projectiles constantly burst out from both sides of the screen and force you to match their energy level just to survive.

While arcade players will enjoy making the tactical decisions that Contra demands, they'll be absolutely ecstatic over the thrills it provides. The nonstop action of the program makes it the finest current example of shoot-and-run games for the C-64. *(Konami, 815 Mittel Drive, Wood Dale, IL 60191. C-64/$29.95.)*

—WALT LATOCHA

PURPLE HEART ..... B

The top brass wants you to go on a secret mission. If you don't accept, you'll miss out on the danger!

Originality is somewhat lacking in this game, unless the idea of picking up weapons, shooting at different fire powers, surging through enemy lines and winding your way into various encampments seems new to you. Nevertheless, there are some novel touches, such as a "blanket" bomb, with its radiation whirling in different directions on the screen, or the way your soldier pulsates when hit.

Animation, in the form of crackling bullets, roving enemy fighters, sprinkling explosions, speeding tanks and colorful fireworks is smooth. The graphics deserve extra praise. If you like crisp detail, you'll enjoy the orange, flashing fire gushing out of your flamethrower; enemy soldiers collapsing to the ground like puppets; and concrete buildings, futuristic hardware and intricate gadgets.

A few of Purple Heart's antics seemed decidedly arbitrary. Sometimes, a single bullet wiped me out; at other times, I received a constant hammering without slowing down. I haven't figured out if this was just random madness, or perhaps the program honestly kept track of my energy-levels and responded accordingly.

Enemy movement patterns are repeated over and over, so each time you boot the program, you know what to expect. I know this happens in most arcade games, but it doesn't necessarily make playing any easier.

Think of it as inspired chaos. All in all, Purple Heart is a pleasurable playing experience. *(Scorpion, 19 Harbor Drive, Lake Hopatcong, NJ 07849. C-64/$29.95.)*

—JOHN DIPRETE

VICTORY ROAD ..... B+

You'll need sharp reflexes when you play this sequel to Ikari Warriors. Victory Road has five phases, and your goal is to complete each one before going on to the next. As you move, the terrain scrolls downward and various structures appear that force you to take detours.

Movement is via joystick: You must dodge or destroy vile things like Winged Man-Beasts, Yellow Crabs, Trolls and Green Gremlins who come scurrying, and possibly even shooting, at you.

You start out with a total of four lives. When you die, your figure shimmers eerily, and you resume your new life in the same spot. You can gain extra lives by earning points. Losing all your lives means that you will have to begin again at phase one.

Now and then, you come across human corpses in your path. If you step on one, you get a nifty flamethrower, which you're allowed to keep until you die—then it's back to shooting bullets. I found that I preferred using a flamethrower even to getting a new life, because my gun and grenades couldn't hold a candle to the heat weapon's billowy destruction. Your enemies won't be able to cope with its frothy, boiling globs of energy.

When you walk on a lightning-bolt symbol, a blaze of light erupts that electrocutes all nearby pursuers. Melting monsters this way is fun, but remember to keep moving!

As you travel, pulsating noises split the air. The program's music is worthy of an award.

Enjoying Victory Road isn't just a phase you go through: it's a way of. . .death. *(Data East USA, Inc., 470 Needles Drive, San Jose, CA 95112. C-64/$29.95.)*

IT'S HERE!

Runs in 64 AND 128 modes!

A Special Announcement for All Owners of
- C-64 and C-128 Computers
- GEOS, by Berkeley Softworks
- And GEOS POWER PAK, from *RUN* Magazine

I N T R O D U C I N G

GEOS POWER PAK II

A Must for All GEOS Owners!

This brand new collection of the most useful GEOS enhancements, desktop accessories, utilities and applications sets the standard for all C-64 AND C-128 owners! Set your sights on the best GEOS computing ever, with GEOS POWER PAK II!

Owners of the original GEOS POWER PAK will find this encore presentation a valuable addition to their GEOS library, since every program on POWER PAK II is completely new and different. Plus, you'll get the best GEOS Telecommunications Program to date!

C-128 Owners! This POWER PAK is for YOU, because every program is completely 128 compatible!

GEOS POWER PAK II draws on the best programmers and authors in the GEOS community, so you know you're getting top-quality, leading edge software. Experts like William Coleman, Francis Kostella and Joe Buckley.

Order Now! Call 1-800-343-0728

Here's what you get with GEOS POWER PAK II:

- **GeoTerm Plus.** A full featured terminal package that offers autodialing, phonebook, ASCII buffer capture, a built-in CONVERT routine and more.
- **Q&D Edit.** A text editor that allows you to quickly write nonstyled documents and save them in a variety of formats. Also reads all ASCII files, and geoWrite versions 1.1 through 2.1.
- **Fonts and Clip Art.** A collection of nifty new fonts and imaginative art for use in geoPaint and geoWrite.
- **DocWrite II.** Use geoWrite to create documentation for your programs, then display them for easy review.
- **Games!** Enjoy the new and visually exciting strategy games "geoTiles" and "Egyptian Siege."
- Plus more. . .all completely 64 and 128 compatible!

SPECIAL PRE-RELEASE DISCOUNT. Order GEOS POWER PAK II within the next 30 days and save $5.00! Save more! Order the Original GEOS POWER PAK at the same time and save $10.00! You get a total of 17 applications and utilities, plus dozens of clip art images and fonts for one low price!

☐ **YES!** Send me GEOS POWER PAK II for just $24.97.

☐ Send me both POWER PAKs for $39.97—I save $10!

GEOS is needed to operate POWER PAKs I and II. POWER PAK I programs run on C-64 only. GEOS POWER PAKS are products of *RUN* magazine, and are not connected with Berkeley Softworks, creator of GEOS, or Commodore Business Machines, manufacturer of the C-64 and C-128.

MAIL RUN

More kudos for RUN Paint and concerns about Commodore's support of educational software.

A GLARING PROBLEM

Your article, "R for Healthy Computing" (April 1989), was most interesting. However, I'd like to comment on the cover illustration, which shows the desk near a window and the monitor screen aimed directly at the operator's eyes.

My desk is arranged similarly, and the glare makes it difficult to see the screen clearly. To solve the problem, I tilted the monitor down to reflect the glare below eye level.

—JOHN T. LIVINGSTON
WEST PALM BEACH

METHINKS THOU DOST PROTEST TOO MUCH

I agree with Josh Jacoby's letter ("Much Ado About Nothing," Mail RUN, March 1989) concerning the cost of using QuantumLink's telecommunications service. I live in Canada near the U.S. border and closer to Q-Link than most Canadians and Americans. One hour on Q-Link costs $9.95 per month, 15 cents per minute, and eight cents per minute "Plus" time. There are no "free hour" or "bonus month" reductions in Canada.

And it amuses me that Mr. Dougherty of Berkeley Softworks, publishers of GEOS, suggests that any GEOS questions can be answered by contacting Q-Link. That solution is more expensive than the program itself.

—WILLIAM MITCHELL
STONEY CREEK, ONTARIO, CANADA

A LONE STAR FOR COMMODORE

I'm an English teacher who supported the C-64 for education. My school district decided, however, to go with the Apple computer because of lack of educational support from Commodore, which has now lost this market to Apple. If Commodore had pushed C-64s, they'd now be in a position to push Amigas. Instead, they failed miserably while Apple was there, ready to go.

At a computer education conference, I told a gentleman that I was interested in educational software for the C-64. He literally threw an old copy of lesson-drill programs on the table and stated that "this is about all that is left of software for the C-64—if it's still available"!

Apple has not let us down or abandoned us, but Commodore can't make the same claim. No one believes that Commodore is serious or competitive in the education market.

—DOROTHY HEMME
SUGARLAND, TX

See last month's article, "Truant No Longer?", which reports on Commodore's revived efforts to support the education market.

—EDITORS

POSEIDON ADVENTURE

I enjoyed the letter from Major Keith H. Hodges ("Servicing Our Soldiers," Mail RUN, April 1989) regarding mail order businesses and their dealings with the servicemen and women, particularly overseas. Poseidon Electronics (103 Waverly Place, New York, NY 10011), a CP/M-only mail order house, has been dealing with APO/FPO accounts for years.

To answer the Major point by point:

1. Our phone number is a non-800 number (212-777-9515).

2 and 3. One of three people is manning the phone at all times. If the information requested requires special assistance not immediately available, we will write back or call within 24 hours.

4. If you're already a client, we have your name and zip code on our database for quick identification.

5. All postal charges to APO/FPO are first class.

6. We don't service credit cards, but we do accept checks and money orders, which are immediately honored. Orders are shipped within 24 hours.

7. Return a defective disk along with a description of the problem. We'll either refund the cost (minus shipping) or send a reduplicated disk at no charge.

8. We do not advertise. We depend on mention in computer magazines, BBSs and word of mouth.

—RALPH S. LEES, JR., PRESIDENT
POSEIDON ELECTRONICS
NEW YORK, NY

FUN PAINT

Your RUN Paint program (March 1989) deserves praise and plaudits from readers. The program puts you in front of other Commodore publications because of your willingness to go over the "magazine length" barrier. Congratulations on meeting highest reader expectations.

—JOHN LOCKE
CENTRAL POINT, OR

RUN Paint is a fantastic program. I own several paint-and-draw programs, but never have I seen a program like yours. It's comparable to KoalaPaint and more user-friendly than OCP Art Studio. I also want to congratulate programmer Robert Rockefeller for his magnificent program.

—MANUEL MARTINEZ
SPRING HILL, FL

WHAT A DELIGHT-FUL IDEA!

The Fontastic 64 program (*RUN*, April 1988) will give the paint-and-draw program, RUN Paint, nine more fonts. Just rename a Fontastic font program to the RUN Paint font format (e.g., change COMPUFONT to RPF.COMPUFONT).

—SHANE HILL
DELIGHT, AR

A CALL TO READERS

WIN Over $5000 Worth of Games

RUN's READER CHOICE CONTEST

YOU COULD WIN ALL OF THE SOFTWARE LISTED ON THIS PAGE

WELCOME TO *RUN*'S SECOND ANNUAL READER CHOICE CONTEST. This is an opportunity for you—the reader—to vote for your favorite entertainment software developed over this past year. You must choose from among almost 200 entries.

The rules for this contest are simple. You select your five favorite games from the ballot listed below. Tear out the entire ballot and send it in. That's all there is to it! Be sure to include your name and address to be eligible for our drawing. We will select one lucky *RUN* reader as the winner of a fabulous grand prize—all of the game software listed on the ballot!

To enter, simply choose your five top games from the list below and send in your selections before August 10, 1989. There will be ten prize winners in all. The winners, as well as the results of the voting, will be published in the December 1989 issue of *RUN*.

RULES: ► Only one ballot per person and only five selections per ballot. ► Anyone of any age may enter, but prizes won by a minor must be claimed by parent or legal guardian. ► Drawing will be held September 8, 1989. ► First prize: All the software listed on the ballot, subject to availability. ► Second prize: A library of ReRUN disks. ► Third prize: A collection of *RUN* productivity software. ► Fourth through tenth prizes: Subscriptions to *RUN*, ReRUN or *RUN*'s special disks. ► *RUN* employees and their families are not eligible.

Software titles are listed below according to the distributor, not necessarily the manufacturer.

A DYNAMITE COMBO!

Laser printers and your Commodore computer—an exciting and relatively inexpensive partnership that blows conventional printing out of the water.

BOTH HOME AND SMALL-BUSINESS users of the C-64 and C-128 are aware of the power and versatility these amazing low-cost computers offer. However, the smooth and efficient operation of your computer is in some cases less important than the appearance of the final printed output. There may well have been times when you've found yourself envious of the high-quality documents more expensive personal computers produce with laser printers, and you've wished your Commodore could do the same. Well, you should know that there's no reason why it can't!

Practically speaking, I don't recommend buying a $6000–$7000 PostScript printer to use with your $100 C-64, but it's possible to purchase a laser printer for a lot less money. Hewlett-Packard (H-P) LaserJet compatibles (the type of laser printer most widely used) can be had for $2000 to $3000, depending on where you buy them. Some models are much cheaper (see sidebar). While still a lot of money, this is within the reach of most small or home businesses. ►

By LOU WALLACE

PHOTOGRAPHED BY LARRY DUNN

High-Resolution Is the Secret

The reason a laser printer produces such impressive output is the dot resolution it's capable of using. While still basically a dot matrix printer, it can generate output—text or graphics—with resolutions from as low as 75 dots per inch (dpi) to as high as 300, thus allowing fonts of higher resolution and graphics far sharper in appearance.

It takes a lot of RAM to generate these high-resolution images, and just about all laser printers come with a considerable amount built in, with the option of adding more. Because Commodores are limited to relatively small amounts of RAM for text and pictures (64–640K), it isn't really necessary to add more to your laser printer. In my experience, 512K to 1MB has usually been enough.

To connect a laser printer to your C-64 or C-128, all you need is a standard Centronics printer interface, the same type you'd use for any non-Commodore printer.

The Crucial Question

The key question isn't the physical connection between the printer and computer, but one of software compatibility. If you're seriously thinking about getting a laser printer, the first question you should ask is whether it'll work with your software. If the answer to that is yes, then go for it. But if the answer is no, you'll need to add to your total investment the cost of buying the necessary software.

If you're skeptical as to whether there's *any* currently available C-64 or 128 software that's designed to be used with a laser printer, you might be surprised to find that the answer is a definite yes!

Word Processing

Since word processing is just about the most common application in personal computing, we'll start with that. First, although few word processors in the C-64 or 128 market come already set up for H-P (or compatible) laser printers, many of them do allow you to create special printer-command sequences for customizing your word processor to your printer. In preparing this article, I used *RUN*'s own RUN Script word processor, which has the ability to use printer macro commands that are created by a separate program called Define Macros, which is in the January 1987 issue of *RUN* (page 70) and can be downloaded from QuantumLink.

To take advantage of the features of your laser printer, you'll have to do some homework, looking up in the printer's manual the control sequences for a function and then instructing your word processor to use them. For example, to turn on Bold mode, you'd need to send the five values 27, 40, 115, 5 and 66 to your printer, and to turn it back off, you'd send 27, 40, 115, 0 and 66. (Of course, these numbers must be in the form of a printer-control sequence—not just embedded in the document.)

You can also generate other text-styling commands, such as italics or underlining. Even more exciting, laser printers usually come with several built-in fonts (more can be added via plug-in cartridges or downloaded by proper software), and you can generate printer macro commands to switch back and forth between them, mixing different fonts, character sizes and styles on the same page.

As I mentioned, our RUN Script works very well with the laser printers, but will *your* word processor work as well? Other programs with the printer macro feature include PaperClip III, Pocket Writer 2, VizaWrite, Superscript and The Write Stuff. To determine if others will work, look in the documentation for the word processor and see if it supports embedded printer-control sequences. Also, the word processor should have the option of outputting true ASCII, not just Commodore ASCII.

GEOS

Since many Commodore owners use GEOS, it was natural to check for H-P laser compatibility in using GEOS applications. Berkeley Softworks wisely created a system of using installable printer drivers for their bit-mapped operating system. With the GEOS package comes a wide variety of printer drivers, including one for the H-P LaserJet.

To test it, I created a letter with geoWrite (GEOS 2.0) and,

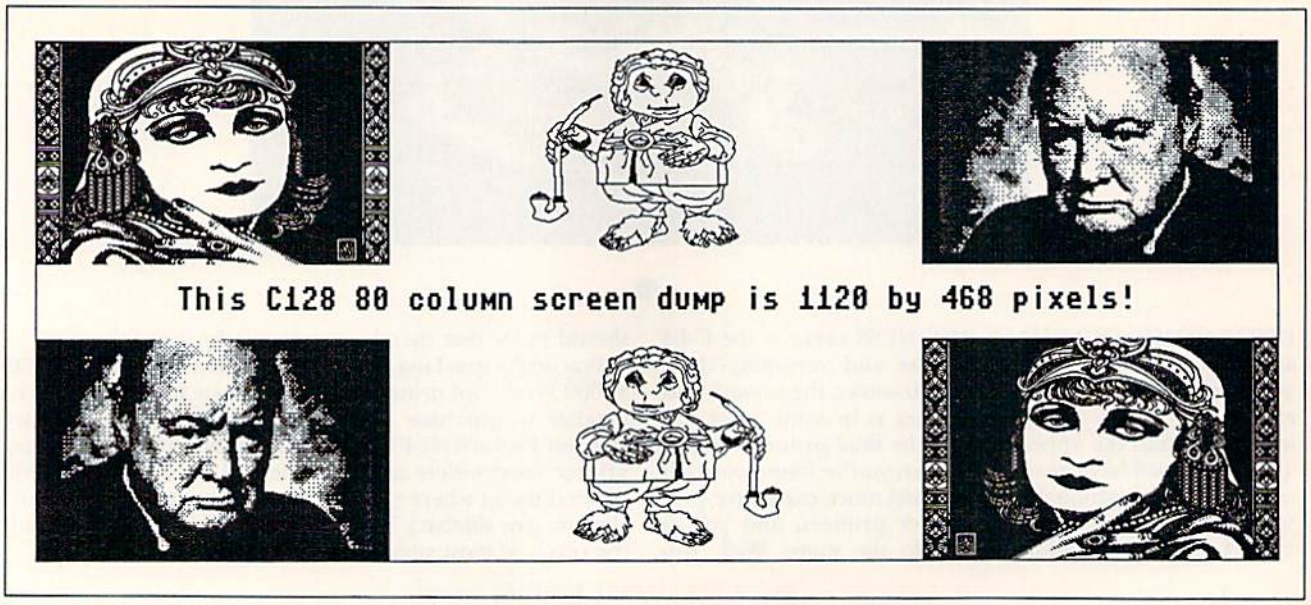

Figure 1. Graphics images produced with the Star LaserPrinter 8.

using a paint driver, converted the word processor output to geoPaint, where I added graphics. With the LaserJet printer driver installed, I was easily able to output a beautiful GEOS document on all three of the laser printers I tested.

When you select the Print option in a GEOS application, the GEOS laser driver asks you what dpi setting you want, within the range of 75 to 300. Normally, you'd use 75 dpi, which generates output properly sized to a geoPaint/geoWrite page, but there may be times when higher densities are useful. For example, you can print a full-page geoPaint drawing at 300 dpi, which shrinks it to about one-eighth of its normal size. This is a great way of making high-quality, camera-ready art.

C-128 Graphics

For C-128 80-column graphics users, Basic 8 (distributed by Free Spirit Software) also uses installable printer drivers and offers H-P LaserJet compatibility in its OkiLaser printer driver. Basic 8 allows you to generate custom graphics screens from 640 to 2540 dots wide, and it also supports the full range of dot densities offered by the laser.

While Basic 8 is a Basic programming language, user applications written in it can take full advantage of any H-P-compatible laser printer. And, because it allows very high-resolution graphics screens, Basic 8 makes it possible to generate and print graphics images that reach the full 300-dpi mode of the laser printer.

Printers

To find out just how well a Commodore computer would work with these printers, we asked several manufacturers of low- to medium-cost laser printers to send in evaluation units. The three companies that responded were Brother Industries, Tandy Corporation and Star Micronics, sending ►

Dear John,

Enclosed you will find the complete information packet you requested on our company, **The ACME Explosives Company**. I am sure that you will find it both informative and exciting, as everyone here strongly believes in our new project.

As you know, our new personal nuclear reactor, code named **MR FUSION**, which promises to

Figure 2. Beginning of a letter printed with the Tandy LP 1000.

RUN

THE COMMODORE 64/128 USER'S GUIDE

TO: *Developers of Commodore game software*
FROM: *RUN Magazine*
RE: *RUN's Reader Choice*

Once again, it's time for RUN's reader choice awards, which, this year, will be devoted exclusively to games software. Readers will be encouraged to cast their ballots for their five favorite games released within the last year.

Figure 3. One of the fonts available with the Brother HL-8.

us their HL-8, LP 1000 and LaserPrinter 8, respectively. I put each of these printers through various tests and found that all were indeed compatible with the H-P.

Basically, the output they generated was very similar, with the biggest difference being in the Text modes. This is mainly due to the fact that each printer comes with a different assortment and number of built-in fonts. (Since adding additional fonts beyond those supplied will cost you more money, I advise buying a printer with as many fonts as possible.)

BROTHER HL-8

The Brother HL-8 is very similar to the H-P LaserJet II. Fully compatible, it comes with 30 fonts and a minimum of 1 MB of RAM. There are two font-cartridge slots, so you can add more fonts by purchasing standard H-P font cartridges. Downloading fonts is possible, but you'd probably prefer using the cartridges.

Its Text mode is rated at 8 PPM, and, because it is so H-P-compatible, it worked well with RUN Script, GEOS and Basic 8. In Text mode, it had both bold and italic styles available with some of the supplied fonts.

The toner cartridge is the standard used with the H-P, which gives you about 4000 pages per cartridge. The other printers it emulates are Brother Twinriter, IBM Proprinter XL, Epson FX 80 and Diablo 630.

I really liked the HL-8. It was dependable and compatible, and it produced excellent output. It comes with two good manuals (but no index), one for users and the other a more technical reference guide.

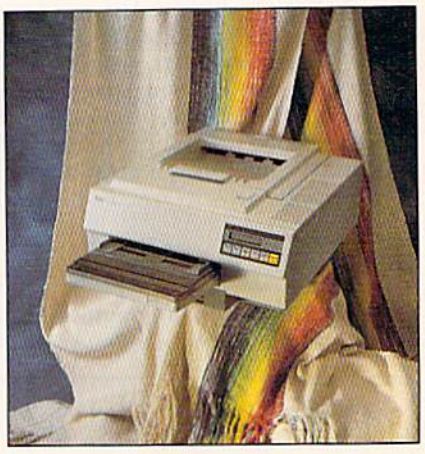
TANDY LP 1000

Tandy Corporation's H-P-compatible printer, the LP 1000, has 1 MB of memory and eight fonts. Since it has no font-cartridge slot, you can add additional fonts only by using software to download them to the printer, and all the software for this is, of course, MS-DOS based. Experienced programmers can write their own font-downloading software, but this is not a viable alternative for most users.

The LP 1000 is rated at 6 pages per minute (PPM), meaning it will print multiple copies of a single page at that rate. It worked very well with GEOS, Basic 8 and RUN Script, although it is limited in not having built-in bold or italic fonts, as did the other two printers I tested. Besides the H-P LaserJet printer, it also emulated the Tandy DMP 2110, the IBM Wheelprinter and the IBM Prowriter.

Since the LP 1000 does not use the same type of toner cartridge as the H-P LaserJet, you'll have to get replacements from Radio Shack, rather than from your local computer store. These cartridges are cheaper than those for the H-P LaserJet, but you get only about 1500 pages per cartridge.

All in all, I found the LP 1000 to be a decent, workable Commodore-compatible laser printer. It was the least expensive of the three I tested, but had the fewest supplied fonts, and adding more would probably be difficult. The user's manual was adequate, but lacked an index.



STAR LASERPRINTER 8

Star Micronics' new H-P-compatible laser printer is an all-around winner. Like the others, it has 1 MB of RAM as standard, and comes with 16 built-in fonts. There are two font-cartridge slots, but these do not use standard H-P font cartridges; instead, they use a format available only from Star Micronics. While that's a bit of a drawback, it is worth noting that each of the Star cartridges has more fonts than a comparable H-P cartridge.

Text output is rated at 8 PPM, and the Star worked as expected with Basic 8, RUN Script and GEOS. Styles such as bold and italic were available without adding more fonts.

The toner cartridge is standard H-P, and you can expect about 4000 text pages per cartridge. Additional printers it emulates are Diablo 630, Epson EX-800 and the IBM Proprinter.

I have to admit that of the three printers tested, I liked the Star LaserPrinter the best. It generated high-quality output, was dependable and had two excellent (and indexed) manuals. If I had to choose one for my desk, this would be it. ■

Two Low-Cost Alternatives

By LOREN LOVHAUG

THE OKIDATA LASERLINE 6 and the Centronics Pageprinter 8 are both low-cost laser printers that many Commodore computerists might want to consider. Both have recently been discontinued by their manufacturers, but can be purchased for under $1000 through a variety of outlets.

THE OKIDATA LASERLINE 6

The Laserline 6, 6 PPM and H-P compatible, is based on the increasingly popular Ricoh engine, by virtue of which it is one of the least expensive laser printers to maintain and operate. Toner cartridges, for instance, are readily available for under $30 and generally last for 1500–2000 pages, depending on the composition of your printing. The Laserline 6 comes with 14 fonts, making it a highly versatile text printer right out of the box.

Perhaps its only drawback is its limited memory capacity of 128K, expandable only to 512K. This makes the Laserline 6 incapable of producing a full-page, 300×300 dpi graphics bitmap. In reality, this limitation may not be crucial for many C-64 and 128 owners, as I am not aware of any Commodore software that produces such large bitmaps.

However, you should bear this limitation in mind if you think you might want to use your laser printer with software on other computer systems that utilize full-page bitmaps in order to render pages (such as most desktop publishing programs on IBM PC-compatibles). Although the Laserline 6 is not being manufactured any more, Okidata has pledged to support the printer well into the 1990s, and they still market a variety of add-on font cartridges.

THE CENTRONICS PAGEPRINTER 8

The Centronics Pageprinter 8 is an 8-PPM laser printer based on a Centronics engine. In its basic configuration, it comes with 512K of RAM and only one resident font, 10-point Courier.

In this standard configuration, the Pageprinter 8 can emulate only an Epson FX-80 or a Diablo 630, but these emulations make it compatible with just about every piece of Commodore software available today, at least as far as printing text is concerned.

Curiously, even though the Epson FX-80 is certainly graphics capable, the Pageprinter 8 will not allow you to output bitmap graphics of any resolution unless you expand the Pageprinter's memory beyond 512K. This was a strange decision on the part of the printer's designers, as 512K is certainly adequate for most FX-80 Graphics modes.

Genicom, the company that purchased Centronics a few years ago, has promised to continue to support the Pageprinter 8 through 1992, and they market a variety of add-on font and emulation cartridges, including an H-P emulation board and a 2-megabyte memory upgrade. Recently, I have seen the Pageprinter 8 priced as low as $600, which makes it an excellent value for someone looking for a very fast letter-quality text printer. R

Lou Wallace is RUN*'s technical manager. Loren Lovhaug frequently authors our Telecomputing Workshop column.*

RUN Shell

Here's the versatile disk- and file-handling utility that Commodore should have included with every C-64 and C-128.

By JOHN RYAN

With the introduction of the 1581 disk drive and RAM expansion modules, I've developed a DOS utility compatible with both the C-64 and C-128 and all three disk drives. Called RUN Shell, it's the newest and most powerful DOS shell to date.

RUN Shell is a file-maintenance and disk-archiving utility that runs in both 64 and 128 modes. It also supports both 40- and 80-column output; Burst mode; all three Commodore RAM expansion modules, to a limited degree; and partitioning and subdirectory access on the 1581 drive.

Getting Started

Type in, save and run Listing 1 (call it Listing 1 or anything *except* RUN Shell), which creates the RUN Shell machine language program. Then, for the C-64, type in and save to the same disk the following small boot program.

```
10 IF A=0 THEN A=1:LOAD "RUN
   SHELL",8,1              :REM*197
20 SYS 4864                :REM*157
```

To use RUN Shell, just load and run the boot program.

For the C-128, enter BOOT "RUN SHELL" or BLOAD "RUN SHELL", B0:SYS4864. If you intend to employ a RAM expansion module, be sure it's installed before power-up.

The program can be loaded in either 64 or 128 mode, but don't try to load it in one mode and switch to another, because it configures itself to fit the particular machine. You may, however, toggle between 80- and 40-Column modes.

Although it's a stand-alone program, RUN Shell will operate with many machine language programs that don't occupy memory from $1300 to $5000. However, due to the way it configures itself under the Basic of both machines, it won't operate with many Basic programs. This limitation affects users of RAM expansion modules, but more on that later.

Almost all of the options available in RUN Shell bring to the shell window a directory from which you can select files to work on. To choose a file for some operation, use the cursor keys to move the directory arrow to your selection. Then highlight the filename by pressing the space bar. If you change your mind, just deselect the file with the F5 key.

When you're finished highlighting all the files you want for any particular operation, you activate the operation by pressing the F7 key. In many cases (but not all), a Y/N prompt will ask you to verify your selection before pressing F7.

You can usually abort to the main menu by pressing the stop key. If not, there'll *always* be a Y/N prompt later to abort the operation.

There will be instances where RUN Shell expects a keypress from you to continue an operation (when swapping disks during a file copy, for example). The rule here is to press the space bar to continue or the stop key to abort to the main menu.

To exit RUN Shell, press the F1 key, and press it again to re-enter. C-64 owners must reinitialize the program after using the run-stop/restore combination by entering SYS 4864.

The Options

Disk Setup—You can configure RUN Shell to operate under two different logical drives (logical meaning that device numbers and drives are handled internally with the shell program). As you'll see, these logical drives—drive A and drive B—can be set up for any combination of disk or RAM drives, as well as device numbers 8–11. To keep things straight, I'd suggest that you set the lower device number to drive A and the higher device number (including RAM drives) to drive B.

You can also configure RUN Shell for single-drive operation by setting both the A and B drives to the same device number.

Rename a File—With the Rename utility, you can rename all the files in a directory. The directory is displayed in the shell window, and you select and highlight the filename you want to change by using the cursor keys and space bar as described above. When the highlight bar appears, enter a new filename that's no longer than 16 characters; then press return and continue the operation. When you're ready to activate all the new names for the directory, press the F7 key.

Scratch a File—This option operates much like Rename. Use the cursor keys and space bar to select and highlight filenames you wish to scratch. When all selections are made, press F7. The F5 key deselects a file if you change your mind after highlighting, and the stop key aborts to the verification prompt. Neither the Rename nor Scratch option works with RAM drives.

Format a Disk—Formatting is one of the most frequently used options in RUN Shell. First, the Format routine attempts to read a disk header from the selected drive. If an error occurs, it assumes the disk hasn't been formatted before and prompts for a header name and two-letter ID. If the disk has been formatted before, the header name appears in the input window. Then you can reformat with the same header name by pressing the return key, or you can type in a new name, with or without a two-letter ID.

If the drive selected is a RAM device, you needn't enter a header name, but you do have to specify the type of device ►

RUN it right: **C-64; C-128 (in both 40- and 80-Column modes); 1541, 1571 or 1581 disk drive**

ILLUSTRATED BY LAURA JOHNSON

NEW

GEOS 128 2.0

Includes:

- Geowrite Workshop 128
- Geospell 128
- Many dramatic improvements
- Both 80 and 40 column modes
- Much, much more

68956 $CALL

Diskette Storage

$9.95

- 100 disk (5 1/2") capacity.
- Lock and keys for extra security and easy carrying.
- Includes 8 index dividers for organization of filing and retrievel.
- Made of durable anti-static, high impact plastic.
- Attractive smoke colored lid.

MINIMODEM-C.

A Commodore direct-connect modem (no additional interface is needed) that not only fully emulates the Commodore 1670 modem, it also offers 100% Hayes compatibility (not just partial Hayes compatibility like the 1670 or some Avatex models). This allows the Minimodem-C to be used with ALL communications software for the Commodore 64, 64C, and 128. Other key features include seven status indicators, Busy Detect, DTR signal support, High Speed Detect Line, and Auto Answer/Auto Dial. Multiterm 64 and 128 software included with the modem, so you can start communicating as soon as you recieve it! Full one year warranty.

at the prompt. *All* modules must be formatted before being used as a logical drive or you'll get a RAM Disk Full error message.

Clean Up a Disk—This is a collect operation, and no verification is involved, so be sure the disk is in the proper drive.

Copy File—Using this option, you can copy files (except relative files) between any two disk drives other than a RAM expander (see RAM, below). Just highlight the files you want to copy and then press F7.

Commodore 64 users are limited to copying files of 90 disk blocks or less, while C-128 users can go up to 180 blocks. Use the Copy Disk routines to copy disks with larger file sizes.

To copy files from a 1581 subdirectory, you must first open the subdirectory with the Directory routine. With a single 1581 drive, you can copy only 90/180 disk blocks at a time, because RUN Shell won't detect previously opened directories after each disk swap. (RAM expansion users have a way around this limitation.)

Copy Disk—The Copy Disk option completely reproduces a disk. It works best with two drives, although it can be used with one. If you have a 1581, keep in mind that trying to single-copy 800K of data with a C-64 takes about 26 disk swaps (16 for the C-128), so use the Copy File routine when appropriate. It's very important that 1541/1571 users format the target disk either before entering the Copy Disk routine or while in the routine to ensure faithful data reproduction; 1581 users must format their disks beforehand.

To contrast C-64 and C-128 copying times, the C-64 option single-copies a 1581 disk in about 50 minutes and a 35-track disk in about 25 minutes. The C-128, with its Burst protocol, single-copies the same disks in about 12 minutes and a little over seven minutes, respectively. These times are slightly lower in dual-drive operation.

You can't copy from a 1581 drive to a 1541/71, because of the different formats involved.

Create Dir/RAM—These two options are for 1581 and RAM expansion module owners only. With Create Dir, you can create partitions and subdirectories on the 1581 disk drive more easily than with the utility supplied on the demo disk. Just select the starting track of your partition with the + or − key (pressing the space bar to lock in the selection); then use + or − to scroll through the size of directory desired, and RUN Shell will automatically make the calculations for creating the partition. Press the space bar again to lock in the block size, and then answer the prompts as they appear.

To create a subdirectory from the partition, answer the formatting prompts as they come on-screen. You don't need to format a subdirectory within this option. You can format the partition by opening it within the Directory option and then using the Format option. Formatted partitions will always be 40 blocks less than your selected number in order to accommodate the partition directory.

Use this option only on new disks, as the partition routine overwrites any data already in the selected tracks of the disk.

You can create nested directories (directories within directories) as long as each encompasses at least three tracks and doesn't fall on the directory track (the first track of the directory) of the previous partition. Consider the following mock directory:

Main subdirectory #1: tracks 1–20

Subdirectory #2: tracks 2–5 (within main)

Subdirectory #3: tracks 6–18 (within main)

Notice that all the directories are at least three tracks long (minus nested subdirectories), and none starts on the first track of the other.

Once a directory is in place, you must access the "root" directory by pressing the stop key (see Directory, below). Then you must reopen the directory in which you want to nest the new subdirectory before you access the Create Partition option. I'd advise you to play around with this option before attempting any serious partitioning, and to refer to the 1581 user's guide for more information on partitions and subdirectories.

RAM—This option for owners of RAM expansion modules is a supplement to Commodore's RAMDOS utility, not a replacement. It includes three suboptions and requires that your RAM expander must be previously formatted.

The System to Expansion suboption lets you load disk files into the RAM drive. When RUN Shell asks you which logical drive to use, always select the logical RAM drive as the target (to load to) and a disk drive as the source (to load from). Then highlight the desired files and press F7 to initiate the load. *Don't* attempt to load files containing more than 90 disk blocks on the C-64 or 180 blocks on the C-128, or you might corrupt the computer's memory. You'll notice that the number of blocks the drive has free corresponds to the bytes available in each RAM expansion module (less the overhead directory space that's maintained in each module).

The second suboption loads files from the RAM drive into system memory. Here again, select whichever logical drive is assigned to the RAM drive. (This may sound confusing, but you'll get the hang of it.) With this suboption, you never load from a disk drive.

Plan on this operation handling only sequential files and machine language programs. Since Basic is reconfigured to accommodate RUN Shell, many Basic programs won't work properly with it.

With this option, you don't have to load a word processor to examine a sequential file. Just load the file into the RAM drive and download it into system memory; then, using the cursor keys, scroll through it in the directory window. If you have a machine language file that doesn't occupy the same memory area as RUN Shell ($1300–$5000), you can download it, then exit the Shell and SYS to the program.

Machine language programmers might like to know that the Power Assembler can function when RUN Shell is active, since Basic memory is moved up to location $5000. This may be true for other assembler systems, as well.

The third RAM suboption lets you "dump" all RAM directory files to disk and provides a handy way of copying files from one subdirectory to another. Just open a subdirectory on your 1581 drive and select Disk to Expansion to load the files into memory. Then close the subdirectory (see Directory, below), open the target subdirectory and select Expansion to Disk.

Select the logical RAM drive as the source and the logical disk drive as the target for this suboption. There's no need to select files here, since the entire RAM directory is dumped to disk.

This suboption will appeal to those who want to make multiple copies of disk files without a multitude of disk swaps, and it's handy for cataloging disks. Normally, grouping similar programs together on a single disk involves dozens of disk swaps and a big headache. With this RUN Shell feature, you can selectively load files from several dozen disks into the RAM drive, then dump them all to a single disk.

Disk Log—The Disk Log option reports the starting and ending addresses of a selected file, as well as the total number of bytes it contains. It handles only one filename at a time, and, with sequential files, only the total number of bytes is significant, since the starting and ending addresses reported are those used by RUN Shell.

Directory—This option displays a disk directory in the directory window, and, if the device is a 1581 drive, it lets you open a partition, as well. Anytime a partition is the active directory, you'll see a message to that effect. You can access the root directory whenever you want by pressing the stop key. Don't deselect a 1581 drive or change disks without first returning to the root directory.

Errors and Other Things

As with any disk-intensive program, there's always the possibility that an important disk or file will get lost or corrupted—through either carelessness or distraction. RUN Shell is designed to avoid such disasters through extensive error checking and verification, but, since I couldn't anticipate every user error that could occur, you should know about the following RUN Shell strengths and limitations.

All normal DOS errors are displayed in the message window during disk access (press the space bar to recover from the error), except during Copy Disk routines. If you attempt to copy a disk with track errors or a nonstandard GRC format (copy-protected), RUN Shell will just skip over the bad track, or worse, freeze up.

RUN Shell won't detect Device Not Present errors and will seem to lock up while trying to access a drive that hasn't been turned on. If this occurs, press the run-stop/restore combination, turn on the offending drive, then reinitialize the program.

Be sure you set up the logical drives according to the disk drives you actually have connected to your computer. If you have a 1541 and tell RUN Shell it's a 1581, you'll be in for an unpleasant surprise as the program tries to access track 41! If this, or something similar, happens, quickly turn off your drive or reset the computer! Likewise, don't attempt to set up a logical RAM device without a RAM expansion module connected.

All files in a RAM expansion device will remain intact unless you turn off your computer or reload RUN Shell, which resets important expansion directory pointers.

Pay close attention to which are the *source* and *target* disks during disk copies. There's nothing worse than staring at a Writing to Destination Disk message while you're holding the destination disk in your hand!

If you're a fan of using "flippies" (disks that have been double-notched to allow writing to both sides), be prepared to have occasional problems with the 64-mode Copy Disk routine. The routine attempts to read track 41 of the disk to determine whether the disk is single- or double-sided (35 or 70 tracks).

Occasionally, RUN Shell will interpret a "flippie" track as a 1571 disk and attempt to copy 70 tracks of data. This won't hurt your drive; all you do is press run-stop/restore if the drive seems to stop, then re-enter RUN Shell and clean up the target disk. You should find that all the copied files have been faithfully reproduced. R

John Ryan, RUN's frequently contributing editor, has become a disk operating system expert.

Running Instructions: **Type in, save and run Listing 1 and then the boot program in the text. To use RUN Shell with the C-64, just load and run the boot program. With the C-128, enter BOOT "RUN SHELL".**

A–Z Scramble

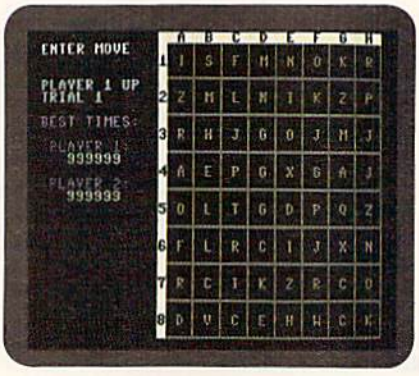
The letters are mixed up, and you may be, too, when you play this alphabet strategy game.

By BRIAN MELCHER

Alphabetizing a grid of random letters in as few moves as possible is the goal in Scramble, a strategy game that's educational for the young and just plain fun for grown-ups. Each of one to five players gets one to five grids to alphabetize by making letter swaps. When there's more than one player, they take turns.

Your score for a grid is the number of swaps it takes you to complete the alphabetizing of the letters, and your final score is your lowest grid score. The grid size for a game can range from two-by-two, with only four letters, all the way to eight-by-eight, with sixty-four letters. Duplicate letters must be grouped in order.

The program starts by asking for the number of players, the number of grids (chances) per player and the grid size. Then the game screen appears, with the grid columns lettered and the rows numbered. To swap two letters, just enter their coordinates in any order. For example, A1B2, B2A1, 1AB2, B21A, A12B, 2BA1, 1A2B and 2B1A will all make the same swap.



Your children will have hours of educational fun while you'll have hours of blissful quiet.

The area within which you can make swaps varies with the size of the grid. If it has two to four squares on a side, you're limited to adjacent letters, vertically, horizontally or diagonally; with a grid that's five to seven squares on a side, you can swap adjacent letters or those separated by one other; with an eight-by-eight grid, you can exchange over two intervening letters. You can change the swap areas by modifying line 100 in the program.

Before entering the last coordinate, you can abort a swap and get a chance to reenter the coordinates by pressing the delete key. The program checks for invalid coordinates, but doesn't count them against you; it just lets you try again.

If you decide to give up on a grid, press the £ key. You'll lose that turn, and the program will continue to your next grid, the next player or the final screen, as the case may be.

Each player's lowest score for the game so far is constantly displayed on the screen. As I mentioned, those lowest scores then become the final scores at the end of play. The game concludes with the choice of playing again or quitting. R

Brian Melcher, who plans to enter the University of Illinois this fall to pursue computer engineering, has about four years of C-64 programming under his belt.

Running Instructions: **Type in Listing 1, save it and run it.**

Cubix 1

Unlike some programs that are blockbusters, this one is a blockbuilder!

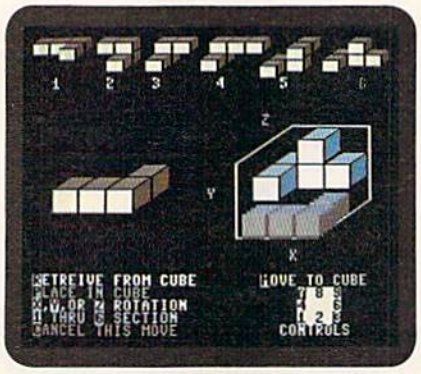
By LEONARD MORRIS

Brain getting rusty? You can exercise it with Cubix 1, a C-128 (40-Column mode only) three-dimensional puzzle that challenges your sense for spatial relationships and your powers of deduction. There's no need for a joystick; Cubix 1 is solved from the keyboard.

Type in the Cubix 1 Basic program (Listing 1) and save it to disk. Then type in, save and run Listing 2 (naming the file "Listing 2"), which generates the machine language program, ML-CUBIX 1. Finally, load and run the Cubix 1 program (Listing 1). In typing in both listings, use *RUN*'s Checksum program to catch any errors you may make.

The goal of the puzzle is to build on the screen a large cube (3×3×3 units) out of six odd-shaped sections composed of unit cubes, three sections having four each and the other three having five. These, numbered 1–6, are displayed along the top of the screen.

Each of the sections must be oriented properly, then moved into the cube construction area and positioned. To work with a section, press its number (on the main keyboard) and a larger version of it will appear on the left side



In this game, your emotions can run the gamut from frustration to elation.

of the screen. There you can rotate it, by pressing the corresponding letter keys, around the X, Y and Z axes until you have it oriented to your satisfaction so it will slide into place in the growing cube.

You fill in the big cube on the right side of the screen with the six sections. When you have a section oriented as you wish, press M to move it into the cube area, then use the numeric keypad to position it. Numbers 1 and 9 will move it in and out along the Z axis, 2 and 8 up and down along the Y axis and 4 and 6 left and right along the X axis. Finally, you place the section to stay by pressing the P key, which redraws the cube showing the new section in place. It also causes that section's number at the top of the screen to change color, enabling you to keep track of which sections you've used.

To cancel a move into the cube—should you decide to rotate the section further, for instance—press the C key. To retrieve a section that you've already placed, press its number and then the R key. The number at the top of the screen will revert to the original color and the cube will be redrawn with the section deleted.

In addition to rotating the six sections, you can rotate the entire contents of the cube area at any time by pressing the zero key and the X, Y and Z keys.

If you attempt to do something the program doesn't allow, such as place a section in an occupied area of the cube or beyond the cube's boundaries, a tone will sound to remind you. There is no penalty. Good luck. It's not easy. R

Leonard Morris is an electronics technician and a free-lance Commodore programmer.

Running Instructions: **Type in and save Listing 1. Type in, save and run Listing 2. Then load and run Listing 1.**

Listing 1. Cubix 1 Basic program. (Available on ReRUN disk. See page 37.)

UTILITIES UNLIMITED, Inc.

12305 N.E. 152nd Street
Brush Prairie, Washington 98606

If you wish to place your order by phone, please call **206-254-6530.** Add $3.00 shipping & handling; $3.00 COD on all orders. Visa, M/C accepted. Dealer Inquiries Invited.

WORLD'S BIGGEST PROVIDER OF C64/128 UTILITIES

Software Submissions Invited

We are looking for HACKER STUFF: print utilities, parameters, telecommunications, and the unusual.

We now have over 1,000 parameters in stock!

SUPER PARAMETERS 1000 Pack

Utilities Unltd. has done it again!! We have consolidated and lowered the prices on the most popular parameters on the market . . . Super-Parameters, now you can get 1000 parameters and our 64/128 nibbler package for just **$39.95!!!** This is a complete 10 disk set, that includes every parameter we have produced.

PARAMETERS CONSTRUCTION SET

The company that has **The Most Parameters** is about to do something **Unbelievable.** We are giving you more of our secrets. Using this **Very Easy** program, it will not only **Read, Compare** and **Write Parameters for You;** it will also **Customize** the disk with your name. It will impress you as well as your friends. The **"Parameter Construction Set"** is like nothing you've ever seen. In fact you can even **Read Parameters** that you may have already written; then by using your construction set, rewrite it with your new **Customized Menu. $24.95.**

LOCK PICK - THE BOOKS - for the C64 and C128

Lock Pik 64/128 was put together by our crack team, as a tool for those who have a desire to see the **Internal Workings** of a parameter. The books give you **Step-By-Step Instructions** on breaking protection for backup of 100 popular program titles. Uses **Hesmon** and **Superedit.** Instructions are so clear and precise that anyone can use it. **$19.95 Set**

ALL NEW BBS **$19.95**
Use 1 to 4 Drives, 300-1,200 Baud unprotected easy to customize so each is different!

BLITZ DECOMPILER **$19.95**
Used to decompile programs that have been compiled with BLITZ

1541 MASH Drive Alignment **$14.95**
Used to easily align your 1541 disk drive

GRAPHIC Label Maker **$14.95**
For use with your PrintShop graphics to make mailing labels.

D-N-Coder **$14.95**
Used as a teacher of machine language.

Master-lock ..... **$ 9.95**
Used to add extensive protection to your basic or M/L programs. Easy to use and works very well.

PhotoCopy ..... **$ 9.95**
Used to convert your PrintShop, NewsRoom, and PrintMaster graphics back and forth.

Super Copy 64/128 ..... **$ 9.95**
This is a collection of copy utilities for the C64 and C128.

Top Secret Stuff #1 ..... **$ 9.95**
The first volume of Hacker utilities on the market, and it's still very useful.

Top Secret Stuff #2 ..... **$ 9.95**
The second volume has everything volume one did not have. Or buy both for just **$14.95.**

ADULT GAME & GRAPHICS DATA DISKS

GAME: A very unusual game to be played by a very **Open Minded** adult. It includes a **Casino** and **House of Ill Repute.** Please, you **Must be 18** to order **Either One.**

DATA ★: This popular disk works with **Print Shop** and **Print Master.**
Now Version 1 + 2 ... **$24.95 ea.**

SUPER CARD PLUS

The **Super-Card** copier was the **BEST** disk archival utility ever created for the Commodore computer...until now...Introducing **SUPER-CARD PLUS!** We took the original idea a step further. The hardware board will now fit **ALL** Commodore and compatible disk drives. The software is easier to use, yet more powerful than ever before!

What can it copy? Well...in short, **everything!** We have not found **anything** that **SUPER-CARD PLUS** could not back up! If you don't believe us, try it for yourself!

The **SUPER-CARD PLUS** board installs **INSIDE** your 1541, 1541C, 1541-II, 1571 and most Commodore compatibles. With just a few minutes of time and a screwdriver, anyone can **easily** install the board.

The software package includes ALL of the necessary programs to make archival backups of **everything!** The 1700, 1764, and 1750 REU (RAM Expanders) are supported for fewer disk swaps. Parallel cables are also supported. With a parallel cable and **SUPER-CARD PLUS,** you can copy a disk in as little as **8 SECONDS!** Without a parallel cable, backups take only 2 minutes!

SUPER-CARD PLUS does **NOT** strip the protection from the disk! It makes an identical copy! This means that copies of copies are also identical. **NO PARAMETERS REQUIRED.**

Think about how many original software programs you own. Now, how much does a backup cost for each of these programs? You can easly see how **SUPER-CARD PLUS** will pay for itself.

SUPER-CARD PLUS PRICES:

1541/1541C	$ 49.95
DUAL	$ 89.90
1571/1541-II	$ 59.95
DUAL	$108.90

FINAL CARTRIDGE III

The ultimate utility from Holland, adds dozens of functions to your C-64 such as—fastload (15x), backup, freezer, printer fr., word problems, pop-up calculator, color screen dump, windows (C-64 works like an AMIGA) and much more. **LIST $69.95 ONLY $54.95.**

THE 128 SUPERCHIP - A, B or C (another first)

A — There is an empty socket inside your 128 just waiting for our **Super Chip** to give you 32K worth of great **Built-in Utilities,** all at just the **Touch of a Finger.** You get built-in features: **Files Copier, Nibbler, Track & Sector Editor, Screen Dump,** and even a 300/1200 baud **Terminal Program** that's 1650, 1670 and Hayes compatible. Best of all, it doesn't use up any memory. To use, simply touch a function key, and it responds to your command.

B — HAS SUPER 81 UTILITIES, a complete utility package for the 1581. Copy whole disks from 1541 or 1571 format to 1581. Many options include 1581 disk editor, drive monitor, Ram writer and will also perform many CP/M & MS-DOS utility functions.

C — "C" IS FOR COMBO and that's what you get. A super combination of both chips A and B in one chip, switchable at a great savings to you. **All Chips Include 100 Parameters FREE!**

Chips A or B: **$29.95 ea** Chip C: **$44.95 ea.**

SUPER GRAPHICS 1000 PACK

That's right! Over 1000 graphics in a 10-disk set for only **$29.95.** There are graphics for virtually everything in this package. These graphics work with Print Shop and Print Master.

NEW! SUPER CARTRIDGE EXPLODE! V4-1 w/COLOR DUMP $44.95

Introducing the **World's First Color Screen Dump** in a cartridge. Explode! V4.1 will now **Support Directly** from the screen. FULL COLOR PRINTING for the **Rainbow Star NX-100** and also the **Okidata 10 & 20** printers.

The **Most Powerful Disk Drive** and **Printer Cartridge** produced for the COMMODORE USER. **Super Friendly** with the features most asked for.

- **SUPER FAST** built-in single drive 8 or 9 FILE COPY, copy files of up to 235 BLOCKS in length, in less than 13 seconds!
- **SUPER SCREEN CAPTURE.** Capture and Convert **Any Screen** to KOALA or DOODLE.
- **SUPER FAST FORMAT (8 SEC'S)** - plus FULL D.O.S. WEDGE w/standard format!
- **SUPER FASTLOAD** and **SAVE** (50k in 9 SEC'S) works with all **C-64 or C-128's No Matter What Vintage!** And with most after market drives EXCEPT the 1581, M.S.D. 1 or 2.
- **SUPER PRINTER FEATURES** allows ANY DOT MATRIX PRINTER even 1526/802 to print HI-RES SCREENS (using 16 shade GRAY SCALE). **Any Printer or Interface Combination** can be used with SUPER EXPLODE! V4.1 or V3.0.
- **NEW and IMPROVED CONVERT** feature allows anybody to convert (even TEXT) Screens into DOODLE or KOALA Type Pictures w/Full Color!
- **SUPER FAST SAVE** of EXPLODE! SCREENS as KOALA or DOODLE FILES w/COLOR.
- **SUPER FAST LOADING** with **Color Re-Display of DOODLE or KOALA** files.
- **SUPER FAST LOAD or SAVE** can be TURNED OFF or ON without AFFECTING the REST of SUPER EXPLODE'S FEATURES. The rest of Explode V4.1 is still active.
- **SUPER EASY LOADING and RUNNING** of ALL PROGRAMS from the DISK DIRECTORY.
- **SUPER BUILT-IN TWO-WAY SEQ. or PRG. file READER** using the DISK DIRECTORY.
- **NEVER TYPE A FILE NAME AGAIN** when you use SUPER EXPLODE'S unique LOADERS.
- **CAPTURE** 40 COLUMN C or D-128 SCREENS! (with optional DISABLE SWITCH). Add $5.

ALL THE ABOVE FEATURES, AND MUCH MORE!
PLUS A FREE UTILITY DISK w/SUPER EXPLODE! V4.1.
MAKE YOUR C-64, 64-C or C-128*, D-128* SUPER FAST and EASY to use.

VIDEO BYTE! THE INEXPENSIVE DIGITIZER **$79.95**
VIDEO BYTE! the VIDEO DIGITIZER you can use with your C-64 or 128 and a V.C.R., B&W or COLOR VIDEO CAMERA. **VIDEO BYTE!** is the inexpensive alternative to other more expensive units. **VIDEO BYTE!** can be used with SUPER EXPLODE! V4.1, V4.0 or V3.0 EXPLODE!

NEW **SUPER TRACKER** ..... **Only $69.96**
Find where the protection really is. Locate the density and track to break the protection. Encased in a handsome box, sets on top of your drive with L.E.D. read out.

NEW **SUPER CARTRIDGE** **$49.95**
The **ULTIMATE UTILITY CARTRIDGE.** Packed full of useful utilities. Super fast File Copier, Nibbler, Sector Editor, Graphic Label Maker, just to mention a few. 128K of software at your finger tips. **SUPER CARTRIDGE** can be shut off and uses no memory. PLUS 100 FREE PARAMETERS.

Circle 187 on Reader Service card.

A Better Mousetrap

In which we spring on our readers a routine for using a joystick and a proportional mouse at the same time.

By TOM BROWN

Many Commodore users know how to program a joystick; it's easy enough to do, even from Basic. The original 1350 mouse is equally easy, since it works exactly like a joystick. When the 1351 proportional mouse came along, however, it posed a new programming challenge: namely, to make any 1351-compatible program detect, without prompting the user for input, whether a joystick or the 1351 mouse is plugged in, and to respond accordingly. This the program can do by checking the input/output area of memory, but it's difficult to distinguish devices this way. It makes more sense for a program to be able to handle both devices simultaneously.

Interestingly enough, if you plug a joystick into the front joystick port (port 1), it will interfere with the keyboard. Therefore, most programmers prefer to have the joystick work with the rear port (port 2). With the 1351 mouse, the opposite happens: Because of the keyboard operation, it's easier to have the mouse in the front port than in the back. Mousetrap-128 (Listing 1) and Mousetrap-64 (Listing 2) follow this pattern, using the front and rear ports to give the programmer access, respectively, to the 1351 mouse or a joystick—*or both at the same time!*

Inspecting the Trap

Both Mousetrap programs are interrupt-driven machine language routines that are based in part on the original 1351 mouse reader. They use the built-in IRQ routine, which suspends what the computer is doing 60 times a second to perform housekeeping chores, such as reading the keyboard.

Mousetrap scans each port for movement and updates accordingly a pair of screen-pointer registers (one for the X position, the other for the Y). The X and Y registers contain 16 bits each, allowing for values ranging from 0 to 65535 (64K) along each axis. These values can be "scaled" to make the pointer move slower for the same amount of mouse or joystick movement.

Note that, while I refer to "pointer movement," Mousetrap simply prints the X and Y screen coordinates. To produce a visible screen pointer, C-64 users must poke those displayed values into the sprite registers, while C-128 users can employ the values directly in Basic 7.0 sprite commands.

Mousetrap lets you set upper limits for both X and Y to prevent the pointer from leaving the visible screen. The program also reads the firebutton on the joystick or the left button on the 1351 mouse with a single command.

Setting the Trap

Following are descriptions of the commands for using Mousetrap. These are also documented in REM statements in the program listings.

SYS (52500)—Initializes the Mousetrap C-64.

SYS (6400)—Initializes the Mousetrap C-128.

The next four commands return information about the status of the screen pointer or input device.

A=USR(0)—The value of A is 0 if the mouse or joystick hasn't been moved since the last time this command was executed, and it's 128 (high bit set) if it has been moved. This command works a lot faster than comparing old and new values for X and Y using Basic variables.

A=USR(1)—Returns the current X, or horizontal, screen-pointer position in variable A.

A=USR(2)—Returns the current Y, or vertical, screen-pointer position in variable A.

Note that USR(1) and USR(2) both can be scaled if necessary.

A=USR(3)—A is 128 (high bit set) while a joystick or mouse button is being pressed; otherwise it's 0. Since Mousetrap checks the button status 60 times per second, be sure to give the user time to release the button, or multiple presses will register. (Of course, these frequent checks can be handy for certain drop-down menus, which appear only when the button is being pressed and vanish when it's released.)

The following commands give instructions to Mousetrap. Since they must include a dummy variable, A (or an equivalent) must be present, but it will not return a meaningful value.

A=USR(4),X,Y—Lets you set the co- ►

RUN it right: **C-64 or C-128; joystick and 1350 or 1351 mouse.**

Accomplish more. . . in less time with the power and versatility of the ReRUN Disk

Useful Applications

- Word Processing
- Telecommunications
- Utilities
- Music
- Finance
- Databases
- Graphics
- Entertainment, and more . . .

All year long, ReRUN disks bring you pre-tested, high quality, ready-to-run programs for your business, home, and educational computing needs.

Save Time

No need to spend your time entering lengthy program listings from the magazine. ReRUN disks are ready to load and run. No typing. No trouble.

Each bimonthly ReRUN disk offers popular programs from two issues of *RUN* magazine. Programs designed specifically for your Commodore 64 or 128.*

Added Bonus

Plus you get **BONUS programs** never before published . . . plus **hints and tips from the popular Magic column** . . . and a documentation booklet with each disk.

ReRUN saves you money and time by increasing your computing productivity. For example, in previous issues ReRUN has helped our subscribers . . .

- ✓ write more effective letters and reports with our efficient low-cost word processor
- ✓ enhance the image of business presentations with eye-catching graphics
- ✓ manage your expenses, keep track of accounts, calculate the future effects of your present financial moves
- ✓ break the memory barrier. . . create a RAM disk by using the RAM expansion module for your C-128
- ✓ create documents with double-sided pages and columns of text
- ✓ print banners, signs, and mailing labels
- ✓ help your kids with their math and spelling
- ✓ and enjoy our challenging, exciting ReRUN games.

You can order ReRUN disks individually at $16.47 each, but for maximum savings sign up for one year and receive all six ReRUN disks and documentation booklets for only $69.97. You save almost $5 per disk!

To place your order immediately, call our Toll-Free number

1-800-343-0728

(in NH, 1-924-9471).

*Commodore 64 and 128 are registered trademarks of Commodore Business Machines, Inc.

☐ **YES!** Help me put my Commodore to greater use. Send me a one year subscription to ReRUN (6 bimonthly disks and documentation booklets) for $69.97.

Reduced Price! Save 30%

☐ July/August '89 single issue for $16.47 each

_____ back issues for $16.67 each

_____ month _____ year _____ month _____ year

Prices include postage and handling. Foreign Airmail please add US $3.95 per order.

Each ReRUN disk covers two issues of RUN magazine. Shipment occurs after the second issue is published. First available back issue is Jan/Feb. '86.

To place your order immediately call our Toll-Free number 1-800-343-0728 (in NH 1-924-9471)

Mail to: ReRUN, 80 Elm Street, Peterborough, N.H. 03458

ordinates of the screen pointer, as in A=USR(4),50,100. Note the peculiar syntax of this command.

A=USR(5),X,Y—As above, but allows you to set the highest possible X and Y values for the screen pointer. For example, A=USR(5),319,199 sets the limit of pointer movement to the visible 40-column screen area.

A=USR(6),B—The value of B scales the number of pointer counts per unit of distance the joystick or mouse moves. B should fall in the range 0–7. If it's greater, it's "ANDed" with 7 to mask the higher bits and produce a value in the correct range.

The actual pointer count is divided by 2 raised to the power of the value in B. For example, if B=3, X and Y are divided by 2↑3, or 8. Be careful here, as only the values returned to you in USR(1) and USR(2) are divided in this way; the X and Y pointer registers remain unaffected.

If you turn off scaling (with a value of 0), the pointer value will immediately appear in full when you next read it. Remember to reset the upper limits of X and Y appropriately if you plan to use scaling in your program.

A=USR(7)—Turns off the Mousetrap interrupt by restoring the original address in the computer's IRQ vector.

Notes on the User Command

Mousetrap provides some good examples of employing the User command to interface with a machine language program. It changes the User-command vector in the computer to point to the appropriate Mousetrap machine language routines. The command to turn off the interrupt routines does not restore the original value of the User-command vector, as that value is normally just a dummy value used by the computer on power-up.

Remember that the User command returns a value, just like any other Basic function, and that value needs to go somewhere. Either assign it to a throwaway variable, as in A=USR(6),B, or include the User command in an If-Then statement. If you don't, your computer may lock up, and you'll have to reset it or turn it off and on again.

Notes on Interrupts

When you initialize Mousetrap by changing the computer's IRQ vector, the original vector is saved. Then, after each Mousetrap interrupt, execution jumps to this old vector and the built-in interrupt routine carries on. Because of this arrangement, you can "chain" Mousetrap with other interrupt routines. When Mousetrap is turned off, the original IRQ vector is restored.

Placing the Trap

Lines 100–200 of Mousetrap demonstrate how to use some of the routine's commands. To use Mousetrap in your own application, just delete these lines and insert your program.

Note that, because sprites are not used, you are free to use the X and Y values any way you wish. You might use them (along with appropriate scale and Poke commands) to manipulate SID chip values or to highlight menu selections, filenames, and so forth, without sprites. You could even create point-and-click Basic programs for the C-128's 80-column screen!

Whatever your programming needs, keep in mind that, with Mousetrap, 1351 programs are always in season. R

Tom Brown is a freelance programmer with both public domain and commercial programs to his credit, among them RUN's *telecommunications program, RUN Term 128.*

1541 RAMBOard*

Byte The Copy Protection bullet!

Let's face it - war is hell. And in the Commodore world, one of the ugliest wars of all is being waged by the copy protection industry. They're tough. They're clever. And they're very, very determined. If you've seen some of the current ice out there, you know just how determined they are. Well, we're just as determined. And we've got a way to walk right through the coldest ice out there.

What's our secret? The new RAMBOard, a small card that can easily be installed in your 1541 in 5 minutes using just a screwdriver. With this remarkable piece of firmware in place, backup hassles are a thing of the past!

RAMBOard gives you speed - it comes bundled with a fast copier that can archive an unprotected data disk in under 60 seconds. RAMBOard gives you power - working with our dynamic Maverick software, RAMBOard will back up programs that other systems can't even scratch the surface of. Best of all, RAMBOard won't become obsolete - when newer, even tougher protection schemes come along, we'll create new Maveric/RAMBOard parameters to cut right through them. Backed by our famous R&D, you know that we'll do whatever it takes to keep RAMBOard operating behind enemy lines!

Get your RAMBOard today. And the next time some company tries to charge you for an "authorized" backup of a program you've already paid for, remind them that war IS hell - and you know how to raise a little hell of your own.

1541 & 1541C RAMBOard

ONLY $34.95

In Most Cases, Plugs Right In-NO Soldering Required

***RAMBOard Is An Optional Accessory For Use With Maverick™**

THE 1581 TOOLKIT

Is This Utility Healthy? Get A Second Opinion.

Sure, we're going to tell you that The 1581 Toolkit is incredible. But how about a second opinion: "...ten first-rate 1581 utility programs..." "...added an exhaustive 147 page technical treatise on the internal workings of the 1581 and its DOS..." "...all menu driven and quite easy to use, despite the fact that they are all quite powerful and flexible..." "...dozens of little extras..." "...a pleasure to use..." "...significantly outperforms anything released to date..."

The words above are from a review of The 1581 Toolkit in the May/June 1989 issue of INFO Magazine. We received 4 1/2 out of a possible five stars, a very rare achievement for a 1.0 release of a new utility. And as for their expert opinion that The 1581 Toolkit is "...a must for any heavy 1581 user...", we couldn't agree more. Because the Toolkit givers you all this:

- ★ **Fast Disk Copier**
- ★ **Fast File Copier**
- ★ **Byte Pattern Search**
- ★ **Partition Creator**
- ★ **Ultrafast Formatter**
- ★ **Track and Sector Editor**
- ★ **Directory Editor**
- ★ **Error Scanner**
- ★ **Relocatable Fast Loader**
- ★ **File Track and Sector Tracer**

All 10 of these custom utilities use super fast read/write routines and, where appropriate, allow full access to partitions. We designed The 1581 Toolkit to be the finest set of utilities available for the 1581. But we didn't stop there. Included with the Toolkit is a FREE copy of David Martin's invaluable resource, *The 1581 DOS Reference Guide*. This book holds over 100 pages of information that took more than a year of research and investigation into the inner workings of the 1581 to compile. And we've also added exra utilities like a machine language monitor with DriveMon - the perfect companion to *The 1581 DOS Reference Guide*.

You may *own* a 1581 disk drive, but you're not really *using* your 1581 if you don't have The 1581 Toolkit. The Toolkit's strength lies in the fact that, unlike some companies, we took the time to master the 1581 before we began. The reason is simple: we don't care if this is the *first* utility you buy for your 1581 - we just want it to be the *last* one.

THE 1581 TOOLKIT (ON 3.5" DISK) IS ONLY $39.95

Includes Your FREE 1581 DOS Reference Guide

The 1581 Toolkit Works On The C-64 Or The C-128/C-128D In The 64 Mode

SYSRES

Your Last Chance To Own A Classic.

All good things must come to an end. That's true for everything, including software. The time has come to say goodbye to an old friend - SYSRES, the finest BASIC enchancement system ever created for th Commodore computer.

Software Support owns the exclusive rights to produce SYSRES. Reluctantly, we've decided to stop producing this incredible program. Why? The simple fact is that most of the serious BASIC programmers out there already own SYSRES, and there aren't enough new BASIC programmers entering the arena to warrant the expense of continued production of SYSRES.

If you're one of the few serious BASIC programmers out there who isn't yet using SYSRES, maybe you should take a look at some of these features:

- Easy code entry with features like auto line numbering, enhanced key repeat, and fast up and down scrolling of program listings!
- Macros: any shifted key may be set to represent any BASIC or SYSRES KEYWORD. All files may be listed, loaded, run, copied, or scratched by entering a two character command in front of the file name listed in the directory!
- Find/Change any variable phrase or keyword used anywhere in your program. Over 700 search variations are available including pattern matching with wild cards and limitation symbols. Now you can automatically remove spaces and REMS to streamline run-time versions of your programs!

List BASIC programs and relative and sequential files without loading them into memory first!

- Edit text files and assembler source code without having to leave BASIC!
- Do a partial renumber. Move a subroutine to a more logical starting place while preserving all other line numbers and updating all line references!
- Debug with a variable speed TRACE. Display the current and the five previous operations. Display variables as they change or are defined; send the TRACE to the printer!

We haven't even scratched the surface of SYSRES. With features like screen print, multiple drive support, full printer support, and program merge capabilities, it's easy to see why SYSRES is the most comprehensive BASIC programmers' aid package ever produced. And just as comprehensive is the professional documentation: over 110 pages, bound in an attractive three ring binder. You'll also be pleased to know that SYSRES is UNprotected!

So there you have it. If you use BASIC at all, this is the enhancement system that you need. And this is absolutely your last chance to own this classic. As a going away present, we've even cut the price in half! Now there's no reason for you to limp by on plain vanilla BASIC any more. Get SYSRES today - and get involved with some serious programming power!

SYSRES/NOW ONLY $19.95

While Limited Supplies Last!

ALL NEW

THE 1750 CLONE

Thanks For The Memory

Most Commodore users are content to use their computers within the constraints placed on them by a limited amount of RAM. But some people want more. More speed. More power. And that means just one thing - more memory.

Power users have long known that the ideal solution to their memory problems is out there in the form of Commodore's incredible 1750 RAM expansion module. Just plug it in and you've got a whopping 512k of onboard RAM - the same amount of memory found on most IBM computers! This is the memory cartridge that all serious Commodore power users want. There's only one problem.

You can't find them.

That's right. These RAM units are almost impossible to buy. We've always specialized in finding solutions to Commodore related problems - here's what we came up with.

First, we bought brand new Commodore 1764 RAM expansion units, the ones with only 256k of RAM onboard. Next, we had Chip Level Design engineer and produce a custom upgrade that takes a 1764 to a full 512k! That's the same half meg of RAM as a regular 1750! Finally, we tested each and every cartridge, and warranteed them to be free from defects.

Now there's nothing to stop you from taking your Commodore 64 or 128 to levels of power and sophistication that the original designers never even dreamed of! If you're using programs like GEOS from Berkeley; the Pocket Series from Digital Soutions; future versions of Maverick from Kracker Jax; Fleet System IV from Professional Software; or the potent PaperClip III from Batteries Included; if you're using ANY of these programs, you won't believe the difference that the extra memory makes!

IMPORTANT NOTES - READ CAREFULLY

*C-64/64c (but NOT C-128/128D) owners MUST buy a heavy-duty power supply to use these units. The power supply is NOT included - it is available from us seperately.

* If you ALREADY own a 1764 RAM cartridge, we can upgrade it for you. Your unit MUST be in perfect working order for us to upgrade it. The turnaround time on upgrades is approx. 2 weeks. It will NOT be necessary for you to purchase a new power supply - the one that came with your 1764 will still work fine.

THE 1750 CLONE

ONLY $199.95

1764 UPGRADE

ONLY $124.95

ATTENTION C-128 OWNERS

Solderless 64K Video RAM Upgrade

Now that Commodore has released the C-128D with 64K of video RAM, we should be seeing 128 programs address this fantastic new feature soon.

BASIC 8 already has the capability of using all 64K of video RAM. If you own the C-128 in stock condition, you own all 16K of video RAM that Commodore felt was necessary. Using Basic 8 format and the full 64K of video RAM provides you with the ability to scroll through video memory as well as enhanced color resolution.

Up until now, to upgrade the C-128 to 64K of video RAM you would have to first search out the components, then find a competent repair outlet to desolder and install the parts. **What a hassle!**

SOLUTION — We have developed a module that simply plugs in to the mother board of your C-128. **No splattered solder — No heat damage — No hassle.**

This package is available in two different forms. Model A has all parts necessary to complete your upgrade, and Model B is identical except that you supply the RAMs. Again, no soldering is necessary. If you have access to low cost RAMs, we suggest Model B.

Both models include easy to follow installation instructions, a test program to verify proper installation, and the plug in Video RAM Upgrade.

RAM UPGRADE

only **$49.95**

ALL NEW

COMMODORE HEAVY-DUTY POWER SUPPLIES

WATTS The Matter - Can't Get ample power?

Sorry about that. Actually, it's no laughing matter. Our technicians tell us that the majority of Commodore computer problems can be traced back to an inadequate power supply. When the power supply fails, it can (and often does) cause additional damage to the computer itself - and a computer meltdown is no joke.

This doesn't have to happen to you. We are now selling a heavy-duty power supply that will greatly diminish your fear of a power supply failure. These are NOT aftermarket units - they are made by Commodore, and are ideal for use with RAM expanders. They will provide you with a more stable, dependable source of power. This unit will work on ALL C-64's and 64c' on the market.

If your system is important to you, take the extra step to safeguard your investment by getting a Commodore Heavy-Duty Power Supply today. Power you can depend on - with no unexpected shocks.

COMMODORE HEAVY-DUTY POWER SUPPLY

C-64 Version - Only $29.95

C-128 Version - Only $44.95

SOFTWARE SUPPORT INTERNATIONAL

Circle 17 on Reader Service card.

PLEASE READ BEFORE ORDERING: We accept money orders, certified checks, VISA, M/C and, Discover. Previous Software Support customers may use C.O.D. and personal checks. Orders shipped to U.S.A. (48 states), F.P.O., A.P.O., or possessions, please add $3.50 per order for S & H. U.S. shipping is by UPS ground in most cases. FAST 2nd DAY AIR available: add $1.00 per pound additional (U.S. 48 states only). Alaska or Hawaii (all orders shipped 2nd day air), please add $7.50 per order for S & H. C.O.D. available to U.S. customers only ($0 states); add $2.75 along with your S & H charges per order. Canadian customers may calculate the S & H charges by including $4.00 (minimum charge) for the first two pieces of SOFTWARE and $1.00 for each additional piece per shipment. All monies must be submitted in U.S. funds. Canadians must call or write for hardware shipping charges. Foreign customers must call or write for shipping charges. Defective items are replaced at no charge if sent postpaid. All in stock orders are processed within 24 hours. U.S. SOFTWARE orders over $100 will be shipped 2nd Day Air at our regular $3.50 S & H charge (48 states only). Washington residents please add 7.6% additional for Sales Tax. All prices subject to change. All sales are final unless authorized by management.

GAMES GALLERY

In the grand galaxy of games, this gathering got great grades!

By WILLIAM F. GATES

THE RECENT BOOM in C-64 action titles has left many gamers confused about what to buy. It seems as though every time we turn around, another program emerges and shouts,"Play me! Buy me!" In an attempt to clear up the confusion, I researched over 70 games, and then asked myself which ten I would want if stranded on a desert island with a solar-powered C-64. I compared my notes with those of a 12-year old video-game expert, and together we came up with the following.

AIRBORNE RANGER

Parachute down into enemy territory. . .crawl through muddy trenches . . .sneak past enemy bunkers. . .you're an Airborne Ranger. On any one of a dozen missions, you could be photographing a secret enemy airplane or liberating a POW camp. Armed with a knife, rifle, grenades and a LAW rocket, you must complete your mission in time or the Osprey at the pickup point will leave without you.

By creating and saving a Ranger character to disk, you can keep a cumulative score as you advance through the tasks. Excellent documentation, graphics and design make Airborne Ranger a software library "must."

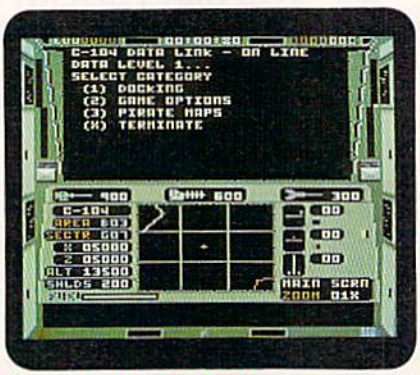
BUBBLE BOBBLE

Adapted from a coin-op game, Bubble Bobble concerns Bub and Bob, two bubble-blowing dinosaurs who must burst bullies by blowing bubbles that box up the bullies and then burst the bullies in the bubbles. (Zounds!) Clearing all the bullies in one level scoots you down to the next. Various items appear to give Bub and Bob many magical maneuvers.

A Two-Player mode allows for simultaneous play. In short, Bubble Bobble is a bubbling good time!

ECHELON

Echelon is not a space-flight simulator or an exploration adventure or a combat



Your control panel in Echelon.

game—it's all of these. This game comes with a keyboard overlay, a map and the LipStik (a microphone headset that lets the player yell "fire" instead of pressing a joystick button). There are two drawbacks to using this device: it's too small to fit post-pubescent heads, and it may cause the user to feel a tad silly.

This aside, Echelon is an intricate, yet elegant, game that lets you explore, patrol and fight—in space.

ARKANOID

Remember the classic, though unsophisticated, game, Breakout? Well, it's grown-up now. Control a "Vaus craft" at the bottom of the screen and deflect a ball against a wall of blocks—you're playing Arkanoid. The destruction of certain blocks releases different capsules that, if caught by your Vaus craft, will

The look and feel of a top-notch race car in Grand Prix circuit.

expand your craft, arm it with a laser, slow down the speed of the ball, enable you to catch the ball, escape to the next level, divide the ball into three components or give you an extra life. Using the proper capsules at the proper time is the key to this most addicting game.

Arkanoid works with all types of input devices, but a mouse is highly recommended.

CALIFORNIA GAMES

Most excellent, dude! Like, it's the Olympics—California style. You and up to seven other dudes can compete in radical events—skateboarding in a half pipe, surfing on a wave, kicking a foot bag, tossing a flying disk, racing a dirt bike and roller-skating down the sidewalk on the beach.

California Games has got totally awesome graphics and animation. Naturally, it's not too stressful, and, you know, it's just like the coolest!

GRAND PRIX CIRCUIT

Want to drive a Ferarri, but you're still making payments on your Yugo? Put on your racing gloves and buckle yourself into your choice of a Williams, McLaren or Ferrari. Choose a track and put your machine in gear! A word of caution—Grand Prix Circuit requires a gentle touch to handle the turns. You must break in, accelerate out and manage the sensitive steering.

Outstanding graphics let you lose yourself in your dream car!

INDIANA JONES AND THE TEMPLE OF DOOM

If you're as much a fan of the movie as I am, you'll enjoy playing the star in this game. You maneuver up ladders and across conveyor belts to rescue imprisoned kids; subdue Thuggee guards with your trusty whip; control an out-of-control mine shaft car by leaning to one side; jump from ledge to ledge using your whip; and, if you're lucky, find the hidden Sankara stones. ►

ALL NEW

MAVERICK ™ v3

Why Is This Program America's Favorite Disk Utility System?

All over the country, packs of imitators are running themselves ragged trying to answer that question. They want to know why we're so popular. They want to know what makes Maverick so special. Well, guess what - we're going to tell them.

Maverick is the physical embodiment of a philosphy that has always been the foundation that Kracker Jax products are built on: Work as hard as you can to create the very best product you can. And then improve it. Such is the case with the new Maverick v3.

Maverick is already the most powerful archival system money can buy. So how do you improve on that? By adding exclusive new features like these:

- A new RAM Expansion Unit support module that allows REU owners to enjoy lightning fast response with Maverick's Quick File Copier & Fast Single Data Copier utilities - no more disk swaps!
- 64k video ram support for 128D's or C128's with 64k of video RAM. This provides a memory buffer for enhanced copying capabilities.
- Have you ever lost valuable data to a fatal error on Track 18? Ever done a short "NEW" and then wished you hadn't? Our new Automatic Directory Recovery Utility recreates Track 18 on 1541 formatted disks to recover your files! This does hours of intense, critical recovery work for you *automatically!* Similar to an item on INFO Magazine's March 1989 "Wish List" of dream utilities they'd like to see!
- An all new Advanced Sector Editor with 100% ML coding for blazing speed and superior performance! Full featured - allows editing in ASCII, HEX, and even disassembly modes! Even includes comprehensive on-line help screens!
- And for GEOS™ 2.0 owners with 1581 drives: Maverick v3's GEOS Toolkit has a new utility that allows you to transfer the incredible GEOS v2.0 over to your high speed, high capacity 1581 drive! This transfers *everything* - which means you can run the 64 or the 128 version from the 1581 alone, WITHOUT using the 5 1/4" disks at all! And the 800K 1581 disk leaves you plenty of room to transfer all your GEOS applications over to the same disk! This is a MUST FOR SERIOUS GEOS users who want to unleash the true power of Berkeley Softworks revolutionary operating environment.
- MORE PARAMETERS! Maverick v3 now boasts over 400 parameters that either copy or entirely "break" the potentially destructive protection schemes of some of the world's finest software. Current Maverick owners know how dynamic our parameters have been, but even they will be amazed by the enhancements and additions we've made, including new parameters and special RAMBOard support capabilities exclusive to Maverick v3!
- Enhanced RAMBOard™ Support: Beginning with parameter Module #3, we gave you the ability to copy the Pocket 2.0 series of productivity software. Then Module #4 gave you parameters for 6 V-Max!™ protected titles - parameters that left the competition stunned, because OUR parameters did NOT require physical drive speed modifictions to work. Now Module #5, included with Maverick v3, will forever separate us from the imitators trying in vain to keep up with us. There are over TWENTY new RAMBOard support parameters that are without equal, plus a large number of special parameters that don't require the use of RAMBOard at all! And our new V-MAX! parameters utilize proprietary read/write verification routines that not only eliminate the need to alter drive speeds, but also save you from having to "copy till it boots", a sure sign of an inferior product.

All of these new features are in addition to the amazing array of utilities that have always been found in Maverick. If there's a better value on the market today, we'd like to see it.

One more thing: the next time you think about buying a program, remember that you're also buying a bit of the company that *makes* that program. Will they be there for you in the future? You *know* we will. Because you've made us the most successful Commodore mail order house in the country.

The New MAVERICK v3.0 - Only $34.95

NOW INCLUDES PARAMETER MODULES 1, 2, 3, 4, AND 5

Maverick v3 (Formerly Renegade) is available from Software Support International. Products that work - from a company that cares

ADDITIONAL MAVERICK FEATURES

- 1541/1571/1581 fast file copier - any direction
- Single or dual state of the art Nibbler
- GCR Editor for the experienced hacker
- Parameters for those tough to backup disks
- GEOS™ Module: PARAMETERS & TOOLS
- GEOS™ file copier - works under desktop
- GEOS™ sector editor - works under desktop
- Error scanner with unique sector editor
- Single of dual drive high speed data copier
- Directory editor helps you organize your disks
- Scrolling M/L monitor with Drive Mon
- Byte pattern scanner for high speed searches
- Works with C-64/C-128 & 1541/1571/1581 drives
- Extensive 40 page documentation included
- EXCLUSIVE Popular subscriber service available
- Technical support from our staff experts.

Attention: Registered Maverick owners!

Parameter Module #5 is now available

Only $9.95

Maverick V3.0 Upgrade also available

Only $9.95

New SUPER SNAPSHOT v4

The State Of The Smart

The Cartridge Wars. For a while there, it was tough going - but we kept fighting to be the best. The result? Just ask the user groups. Ask the dealers. Ask the magazines. Public opinion is unanimous. The Cartridge Wars are over - and Super Snapshot is the clear winner!

How did we do it? By understanding that it is not enough anymore just to be the most powerful. In today's market, you've also got to be smart. Like Super Snapshot v4.

As the list of features at the right clearly shows, we've given Super Snapshot v4 enough capabilities to dazzle even the most demanding power user. But we've also worked hard to give those utilities a sense of style and grace. To make sure that not only could you do a task, but that you could do it easily and logically. While our competitors were making utilities for Commodore computers, we were designing our utilities for the people who **own** those computers.

So when you choose a multi-function cartridge for your system, choose Super Snapshot v4 - the cartridge that was designed to appeal to a higher intelligence. Yours.

Super Snapshot v4 / Only $64.95

ATTENTION 128 OWNERS: C-64 Disable Switch available. Allows you to boot 128 software WITHOUT removing your Super Snapshot cartridge! Add $8.00.
PAL VERSION AVAILABLE: Add $4.00 more per unit for shipping.

In Canada, order from Marshview Software
P.O. Box 1212, Sackville NB, E0A-3C0 • (506) 536-1809

Super Snapshot Features Include:

- Works with ALL Commodore 8 bit computers & drives.
- Totally transparent when disabled.
- Turbo mode - Up to 15X faster loading, 7X faster saving.
- Super DOS Wedge supports devices 8, 9, 10, & 11 with extra commands.
- Archive ALL memory resident programs to disk as autobooting files.
- Exclusive - C-64 Boot Sector.
- Dump screens to disk in popular graphic program formats.
- Dump screens including sprites to printer (many supported) in 3 sizes.
- Only Super Snapshot dumps BOTH multi-color & hi-res formats.
- Sprite disable/re-enable & extented life Game Master features.
- Sprite monitor & full featured sprite editor.
- Fast disk copier for 1 or 2 drives supports 1541/1571/1581.
- Extensive BASIC additional commands for power programmers.
- Fast file copier for 1 or 2 1541/1571/1581 drives.
- 24 Hour BBS support is available!
- Free Kracker Jax Parameter disk - over 100 parameters!
- Includes the legendary Shotgun II from Kracker Jax!
- M/L Monitor does NOT corrupt memory. Interrupt, examine, modify, and resume a running program. All standard commands PLUS bank-switching, bi-directional scrolling, 10 command, track & sector editor, ASCII hunt, and drive monitor.

Plus much, much more!

Also available: The Slideshow Creator

Now you can create dazzling slideshows from eye-catching screens that you've captured with Super Snapshot! Options include fade in/out, shutter on/off, pop on/off, slide on/off. Use any of 10 different fonts to display your personalized, scrolling messages!

Super Snapshot Slideshow Creator / Only $14.95

SOFTWARE SUPPORT INTERNATIONAL

Circle 17 on Reader Service card.

PLEASE READ BEFORE ORDERING: We accept money orders, certified checks, VISA, M/C and, Discover. Previous Software Support customers may use C.O.D. and personal checks. Orders shipped to U.S.A. (48 states), F.P.O., A.P.O., or possessions, please add $3.50 per order for S & H. U.S. shipping is by UPS ground in most cases. FAST 2nd DAY AIR available: add $1.00 per pound additional (U.S. 48 states only). Alaska or Hawaii (all orders shipped 2nd day air), please add $7.50 per order for S & H. C.O.D. available to U.S. customers only (50 states): add $2.75 along with your S & H charges per order. Canadian customers may calculate the S & H charges by including $4.00 (minimum charge) for the first two pieces of SOFTWARE and $1.00 for each additional piece per shipment. All monies must be submitted in U.S. funds. Canadians must call or write for hardware shipping charges. Foreign customers must call or write for shipping charges. Defective items are replaced at no charge if sent postpaid. All in stock orders are processed within 24 hours. U.S. SOFTWARE orders over $100 will be shipped 2nd Day Air at our regular $3.50 S & H charge (48 states only). Washington residents please add 7.6% additional for Sales Tax. All prices subject to change. All sales are final unless authorized by management.

DEALERS — WE HAVE THE SUPPORT YOU'RE LOOKING FOR!

Be forewarned: slight miscalculations bring instant death. But, of course, Indy never miscalculates!

Operation Wolf

Impressively adapted from the coin-op blockbuster of the same name, Operation Wolf places a machine gun in your hands and an endless stream of enemy forces in your face. Your mouse (preferable) or joystick controls an on-screen icon. Pull the trigger: everything in sight is blasted to bits!

Trigger-happy blasting is the name of the game in Operation Wolf.

Operation Wolf is ultra-violent, non-stop action!

Road Raider

Take one ATV (Armored Tactical Vehicle) equipped with a high-powered gun and a built-in Ram-Car for demolition derbies. Add several post-Great Biological Holocaust cities, thousands of radioactive mutants and one demented scientist. Mix with abandoned buildings conveniently littered with food, keys, weapons and other handy items—you've got Road Raider.

This game lacks the touch of a good graphic artist, or any artist, for that matter. But what it lacks in graphics, Road Raider makes up for in mutant-annihilating fun!

Technocop

Race down the highway in the latest high-speed pursuit-and-destroy vehicle, the VMAX Twin-Turbo Interceptor, but watch out for those nasty DOA thugs that jump on top of your car! After a bit of driving, a message appears on your control panel: There's a crime in progress. Your VMAX pulls over, and you get out and walk into a tenement building, armed with your gun and the determination "to protect and to serve."

Well, there you have it: my joystick paradise. In case you're wondering where to start, my personal two favorites are Arkanoid and Airborne Ranger. If you have all of the above, some other action games you might want to investigate are Skate or Die (Electronic Arts), Out Run (Sega/Mindscape), Tower Toppler (Epyx) and Alien Syndrome (Sega/Mindscape).

Editor's note: This is one man's thoughts on his all-time favorite action games. Let us know what game titles might appear on your 1988-89 hit parade list. See RUN's *Reader Choice Contest ballot on page 18—you might win more software than you ever dreamed possible!* ■

William Gates, who works for the police department at the University of California, Davis, likes to play games on his C-64.

GEOWATCH

GeoTips reemerge, along with news, comments and handy hints of interest to all GEOS fans.

By TIM WALSH

I'm glad to be back with more hints, tips and general discussion concerning GEOS. The latest news from Berkeley Softworks has been GEOS 128 2.0 (see my review in the May 1989 geoWatch). Judging from reader response, this updated 128 version has been warmly received.

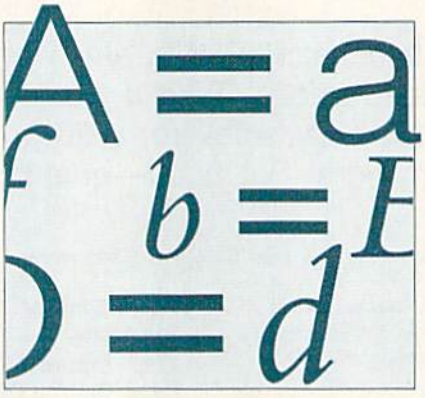
Unfortunately, there are no other new GEOS products to discuss. On the other hand, *RUN* has produced GEOS Power Pak II, a disk that features new GEOS utilities, applications and even a few games, and has the documentation right on the disk. One of the programs, Q & D Edit, helps provide a solution to conversion problems that need more attention now that there are so many more geoWrite and geoWrite Workshop 128 users.

Robert Savage, of Corpus Christi, Texas, wrote to ask how to convert his more than 200 Mirage Concepts word processor files into geoWrite files. The question is basically how you go about making geoWrite files compatible with any non-GEOS-compatible word processors and vice-versa.

A former Mirage Concepts fan myself, I realize that the program has never enjoyed the widespread popularity of other word processors like Easy Script, PaperClip or RUN Script. While GEOS' Text Grabber supports many word processor formats, it does not include a Mirage Concepts converter utility. If you have files created with a not-so-popular word processor, try converting those files with Text Grabber's Generic I and Generic II. If that fails, load the files into RUN Script 64 or 128 (available on Q-Link and ReRUN's Productivity Pak II).

Your conversion then becomes a two-step process. Because RUN Script can handle program, sequential and user files, you can usually read most files from other word processors into it. Once you've read a file into RUN Script, you can save it to disk as a sequential file and then load it into Text Grabber as an Easy Script file.

Q & D Edit allows you to convert existing geoWrite files into either true ASCII or Commodore ASCII text files



and vice-versa. For this reason alone, many users will find it an indispensable utility, especially if they use a non-GEOS-compatible word processor along with geoWrite and want to exchange files between the two formats.

Now to some geoTips.

RENAMING GEOS FILES

Eventually every GEOS user encounters a problem renaming files created with GEOS (most likely geoWrite files). If, for example, you created a geoWrite file and saved it to disk as "Letter", it would appear on the directory as

```
14 "lETTER" usr
```

You can use various public domain and GEOS utilities to convert it into a text file, but most will retain the filename "lETTER". Should you want to load the converted file into a word processor such as RUN Script, you'd get nothing but a "file not found" error. This is because the uppercase geoWrite letters in the filename become lowercase, and the lowercase become uppercase, and the Commodore DOS can't recognize these characters. If you try to rename it using Commodore DOS commands, you'll get a "file not found" error again. Even substituting wild cards for the filename characters won't work.

The solution is surprisingly simple if you take the following steps. Just be certain to save in all uppercase letters any GEOS files that may later need conversion. The filenames can then be read by the Commodore DOS and many word processors. For easy reading, even existing GEOS files can be renamed, from within GEOS, to all uppercase characters. This tip is also helpful for anyone who has downloaded GEOS files from QuantumLink, only to discover they cannot be renamed.

—HERB WETZLER
KEW GARDENS, NY

REBOOTING GEOS 128

If you use a 1750 RAM expander unit (REU) with your GEOS 128 or GEOS 128 2.0, you can sometimes reboot GEOS from the REU (after performing a reset) without disturbing the contents of the REU. Provided you have the 1750 configured as a RAM disk and the deskTop copied over to it, try rebooting by entering the following:

```
BANK 1: SYS 49152
```

If this method fails, try the "128 RBOOT" program included on the GEOS system disk. Either method usually enables GEOS without affecting the REU's contents or the system date and time.

Finally, if you own any version of GEOS 128 and a Commodore 1902A monitor (this trick won't work with most other monitors), here's a hint to improve the video image. Power up your C-128 in 80-Column mode. Then place the GEOS system disk in the drive and enter the following:

```
SYS 52684,8,9
BOOT
```

Once GEOS is activated, you'll have a slightly clearer, sharper screen image.

—RALPH G. SCHWARZ
ETOBICOKE, ONTARIO, CANADA

GEOS PHOTO MANAGER

Viewing a GEOS-created photo album can be a little confusing. Don't try to click on the album icon; rather, double-click on the Photo Manager. Next, open the album you wish to view, and you can page through the pictures. Space permitting, you can create more

than one album and incorporate graphics from other programs into it.

Another handy trick I discovered involves versions of GEOS that pre-date 2.0 and are used with two-drive systems. To facilitate copying a file from one drive to the other, don't bother moving a file icon to the border. Instead, click twice on the icon, drag the ghost of it to the icon of the other disk drive and click again to drop it. The file copying will begin immediately.

—MARY WILSON
CLEARWATER, FL

GEOCALC GRIDS

GeoCalc 128 offers the added advantage of printing forms that contain almost any type of grid. Simply create a blank spreadsheet with the number of vertical and horizontal lines desired, and print it out. With a little imagination, you'll find that geoCalc can be used to create grids for all types of forms, from bowling score sheets to inventory lists.

—JAMES GIBSON
COLUMBUS, OH

HEADER WARNING

The manual doesn't warn you about this, but if you use geoSpell to check the spelling in your geoWrite documents, make sure you don't have a header in the document before you begin the process. On several occasions, I tried to check a document with geoSpell, only to have nothing print out but the header.

I'm not sure whether it was the format of the header or some other problem. In any case, the printer repeatedly advanced the paper, but no document was printed after the spelling check was performed. Also the computer occasionally locked up, and I had to reboot the system disk.

To be on the safe side, I now incorporate headers into my documents only after they've been checked for spelling.

—J. SUTTON
ADDRESS UNKNOWN

PARTNER 128 AND GEOS

If you have Timeworks' Partner 128 cartridge, I advise you to disconnect it from the computer before you attempt to use GEOS 128. After an anxiety-ridden experience of disk returns and complaints to Berkeley Softworks, I discovered that all my problems were caused by the presence of Partner 128. You won't find this mentioned in the GEOS manual, so beware of problems if you use other cartridges with GEOS.

—EDWARD C. WULFF

COMMODORE CLINIC

Using a dual disk drive vs. two disk drives; speeding up subroutines; quickly accessing files on RUN*'s BBS.*

By LOU WALLACE

Q *How can I make a program unlistable after I've loaded and run it, so that others cannot list it and make changes?*

—KEN SHVETZ
WOXALL, PA

A The easiest way is to poke to the list vector. Since you didn't say which computer you have, I'll give you the Pokes for both the C-64 and the C-128 for disabling List:

C-64: POKE 775,1
C-128: POKE 775,81

There'll also be times when you'll want to disable the run-stop and/or restore keys. These Pokes will disable the run-stop key:

C-64: POKE 808,239
C-128: POKE 808,100

These will disable the restore key:

C-64: POKE 792,193
C-128: POKE 792,125

If you want to re-enable run-stop and restore, first save the original contents of the memory locations, then poke them back. Here's an example.

```
A=PEEK(775) REM Save it for later
POKE 775,1 REM Disable C-64 list
POKE 775,A REM Re-enable C-64 list
```

Q *I have a C-128 and two disk drives. When I use the Basic 7.0 Backup command, I encounter problems. When the command asks "Are you sure?", I enter Y, and the computer tells me it's ready. However, it never copies anything. The same thing happens with the Copy command. Am I doing something wrong?*

—JOHN KALASHIAN
RACINE, WI

A The source of the problem is the fact that you have two different disk drives. The Backup and Copy commands are designed to be used with a *dual* disk drive, which is different from *two separate* disk drives. A dual drive is a single device with two drives (drive 0 and drive 1). The Backup command copies a disk between these drives, but not between two different devices (device 8 and device 9, for example).

In the same way, the Copy command copies a file between two drives, but not two separate devices. However, Copy can be used with a single drive to make a copy of a file onto the same drive, as long as the duplicate has a different filename.

Q *Do you have a list of all the files available to date for downloading from* RUN*'s BBS, the RUNning Board? It would save a lot of time and money on our end if we could immediately access the file we need and start downloading.*

—CHRIS PENNINGTON, SR.
HARRISBURG, PA

A No, we don't. The number of programs and files changes every week, so such a list would quickly become outdated. You can, however, easily make a list yourself. Use a terminal program that lets you capture what comes in as text. Log on to the RUNning Board and go to the Files area. Open your terminal's capture buffer and select List from the Files menu. As you list a category, you'll capture it in your buffer. Then save the buffer to disk. Repeat this for each of the categories. After signing off the BBS, use any word processor or program you want to print the list yourself, giving you an up-to-date list of available files, a brief description of each file, its size in bytes and how long it takes to download. Then, to get a list of new additions to the libraries each time you log on, select New Files from the Files menu, capture it in your terminal's buffer and save it.

Readers who wish to try our 24-hour BBS can dial 603-924-9704. It supports 300/1200/2400-baud modems. Keep in mind that it is a single-line BBS, and very busy. It may take you a while to get through.

Q *I have a weird problem with a C-128 program I'm writing. It's quite long and uses a lot of subroutines, and the problem occurs with each one. The first time the computer accesses a subroutine, it is* extremely *slow. However, when the computer uses the same subroutine again, it works very fast, and all subsequent uses of the routine work fine. I'm using several large arrays that take up about one-third of the C-128's variable memory. The program is written entirely in Basic. Is this a bug in the C-128, or is it a problem with my programming?*

—BRUCE ROSE
MANHATTAN BEACH, CA

A No, it's not a bug—it's perfectly normal. The initial slowdown you're experiencing is due to the presence of the large arrays you've created. When you use a subroutine for the first time, it must find and create whatever variables you use. Since you have these large arrays, the computer must move them around to make room for the information in the new variable, and, with a lot of array variables, this can take a few seconds. Once it has allocated memory for this variable, it doesn't need to do it again, so whenever it re-encounters this particular variable, it can run at full speed.

Since each subroutine probably has some variables unique to it, they must have resources allocated the first time, thus incurring the slow execution speed for first-time access. You can avoid the slowdown in speed by predefining all your variables at the beginning of your program.

For example, before dimensioning any arrays, give each standard variable a default value. Then, after dimensioning your arrays, use a simple loop to assign each element a default value. After you do this, your program should run at top speed. ■

Do you have a problem or question about your Commodore computer system, software or programming? Just send your questions to: Commodore Clinic, RUN Magazine, 80 Elm St., Peterborough, NH 03458. Queries are answered only through this column, and, due to the volume of mail, only questions likely to appeal to the majority of our readers can be published.

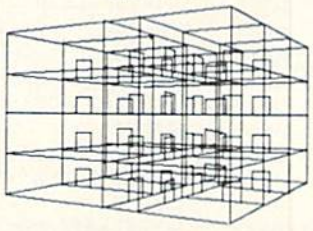
CAD-3D
3-D GRAPHICS DESIGN

☆ Voted Best Graphics Program
—Run Magazine 1988



For Commodore 64/128 in 64 mode
View Designs in Multiple Perspectives

☆ Versatile/Fast 360 degree rotation
☆ 2000 Line Display
☆ Printer capability with latest compatibles
☆ 1520 Plotter availability
☆ Disk Loading and Saving of Designs
☆ Superimpose Designs/Modify Partial Designs
☆ Commercial Graphic program compatibility

Professional—Educational—Home Applications
Architects, Engineers, Designers,
Programmers, Students

CAD-3D!! enter me into the fastest growing field in graphic technology. At a special introductory price $49.95. Add $4.00 for shipping and handling, for C.O.D. add an additional $4.00, (California residents please include 6% sales tax).

Faster than a Speeding Cartridge
More Powerful than a Turbo ROM
It's Fast, It's Compatible, It's Complete, It's...

JiffyDOS™

Ultra-Fast Disk Operating System for the C-64, SX-64 & C-128

- **Speeds up all disk operations.** Load, Save, Format, Scratch, Validate, access PRG, SEQ, REL, & USR files up to **15 times faster!**
- **Uses no ports, memory, or extra cabling.** The JiffyDOS ROMs upgrade your computer and drive(s) internally for maximum speed and compatibility.
- **Guaranteed 100% compatible with all software and hardware.** JiffyDOS speeds up the loading and internal file-access operation of virtually all commercial software.
- **Built-in DOS Wedge** plus 14 additional commands and convenience features including one-key load/save/scratch, directory menu and screen dump.
- **Easy do-it-yourself installation.** No electronics experience or special tools required. Illustrated step-by-step instructions included.

Available for **C-64, 64C, SX-64, C-128 & C-128D** (JiffyDOS/128 speeds up both 64 and 128 modes) and **1541, 1541C, 1541-II, 1571, 1581, FSD-1&2, MSD SD-1&2, Excel 2001, Enhancer 2000, Amtech, Swan, Indus & Bluechip** disk drives. System includes ROMs for computer and 1 disk drive, stock/JiffyDOS switching system, illustrated installation instructions, User's Manual and **Money-Back Guarantee.**

C-64/SX-64 systems $59.95; C-128/C-128D systems $69.95; Add'l drive ROM's $29.95

Please add $4.25 shipping/handling per order, plus $2.50 for AK, HI, APO, FPO, Canada & Puerto Rico. Additional $10.00 for other overseas orders. MA residents add 5% sales tax. VISA/MC, COD, Check, Money Order. Allow 2 weeks for personal checks. Call or write for more information. Dealer, Distributor, & UG pricing available.

Please specify computer and drive when ordering

RUN's Checksum

TYPE IN *RUN*'s CHECKSUM, which serves for both the C-64 and for the C-128 in either 40- or 80-Column mode, and save it to disk before running. When typing in a program from *RUN*, first load and run *RUN*'s Checksum. The screen will display a SYS number that deactivates and reactivates the Checksum. Always disable *RUN*'s Checksum before attempting to run another program. Note: You can abbreviate Basic keywords; spaces affect the checksum only when within quotes; and the order of characters affects the checksum.

With this new version, when you press return after typing in a program line, a one-, two-, or three-digit number from 0 to 255 appears in the home position. If this number matches the checksum value in the program listing, the line is correct. If the number that appears *doesn't* match the checksum value, compare the line with the magazine listing to find your error. Then move the cursor back up to the line and make your corrections. Now, after you press return, the correct checksum value should appear. Continue entering the listing until all the lines have been correctly typed. Then deactivate *RUN*'s Checksum, using the SYS number. Save the finished program.

All the graphics and control characters in the listings in *RUN* have been translated into understandable key combinations. They are the instructions you see inside the curly braces. For example, {SHIFT L} means you hold down the shift key while you press the L key. You do *not* type in the curly braces. What appears on the screen will look quite different from what is designated inside the braces. Here are some more examples:

{22 SPACEs}—press the space bar 22 times

{SHIFT CLR}—hold down the shift key and press the clr-home key

{2 CRSR DNs}—press the cursor-down key twice

{CTRL 1}—hold down the control key and press the 1 key

{COMD T}—hold down the Commodore logo key and press the T key

{FUNCT 1}—press the F1 key

{5 LB.s}—press the British pound key (*not* #) five times

Listing 1. *RUN*'s Checksum program. This program is available on *RUN*'s BBS for users to download.

Type-In Troubles?

YOU HAVE TYPED IN A *RUN* PROGRAM and are having some problems getting it to run. After a while, you feel like calling for help, but since we're not next door, it's expensive to call us. But we can share our experiences with you. Having heard from many users over the years about their difficulties with typing in listings, we've identified a few recurring problems that plague many people but are easy to fix. So read on and see if your problem is one of these. If so, perhaps the answers will help you find and correct the difficulty.

- You get an Out of Data in Line xxx message. This means that a program line was reading from Data statements and reached the end of the data before it was done reading. There are two possible problems.

One might be with the line that reads the data, usually a For . . . Next loop. Make sure you have the proper values for the loop, because if the listing has a loop of 0 to 150 and you've typed 0 to 160, you'll get the "Out of Data" message. If the loop is correct, then the problem lies in the Data statements themselves. One possibility is that you omitted a whole line of data. That's easy enough to find and correct. More likely, you may have skipped one or more individual data items or typed in a period instead of a comma, which causes two data values to be read as one number. Check your typing carefully against the listing.

- You get an Illegal Quantity Error in Line xxx. That means that you've read a number from a Data statement and tried to Poke it into a memory address. The error occurs because the number is larger than 255 (the largest value a memory address can contain), which means that somewhere in your Data statements you've made an error by typing in a number larger than 255. Again, this is easy to check for and correct. Just look in your Data statements for a number larger than 255. You might have added an extra digit, or perhaps you ran two numbers together (23456 instead of 234,56).
- You get a Syntax Error in Line xxx. This could be almost anything. What it tells you is that there is something wrong in the indicated line. Usually you've misspelled a Basic keyword or omitted some required character. List the line and examine it carefully.
- You get an Error in Data message. This occurs in programs that add up all the data as read, and, when finished, compares that sum with what it should be if all the data were typed in correctly. If it isn't the same, it means an error somewhere in typing the Data statements. Go back and check the data carefully, correct the mistake(s), save the new version and try again.

Finally, we urge everyone who intends to type in one of our listings to use *RUN*'s Checksum program, which is printed in each issue. This nifty little program will help you avoid every mistake we mentioned above, except that it won't detect the omission of a line. ■

—LOU WALLACE

AWARD WINNING*
BIG BLUE READER 128/64
File Transfer Utility

Big Blue Reader 128/64 is ideal for those who use IBM PC compatible MS-DOS computers at work and have the Commodore 128 or 64 at home.
Big Blue Reader 128/64 is not an IBM PC emulator, but rather it is a quick and easy to use program for transferring word processing, text and ASCII files between Commodore and IBM MS-DOS diskettes.
Both C128 and C64 applications are on the same disk. ***1571 or 1581 disk drive is required. Does not work with 1541 type drives.***
BBR transfers 160K-360K 5.25 inch & 720K 3.5 inch MS-DOS disk files.
Big Blue Reader 128 supports: C-128 CP/M files, 17xx RAM exp, 40 & 80 column modes and more.
Big Blue Reader 64 is available separately **only $29.95**

BIG BLUE READER 128/64 only $44.95

Order by check, money order, or COD.
Free shipping and handling. No credit card orders please.
BBR 128/64 is available as an upgrade to current users for $18 plus original BBR disk. Foreign orders add $4
CALL or WRITE for more information.

NEW – **BIBLE SEARCH** – Complete KJV New Testament with very fast word and verse search capabilities. Complete Concordance. Word(s) in text can be found and displayed in seconds. Includes both C64 and C128 mode programs. Please specify 1541, 1571 or 1581 formatted disk. **only $25.00**

To order Call or write:

AUGUST

COMING ATTRACTIONS

BELIEVE IT OR NOT!—
At a loss for ways to use your Commodore computer? Your C-64 or C-128 can entertain or be useful in ways that will astound you. To find out how, read our report on unique, but practical, Commodore applications.

LABEL BASE—
C-64 and C-128 owners will find this program extremely helpful for printing out mailing labels.

THOROUGHBIRD RACING—
Tote along the *Daily Racing Form* and a tip sheet to the Commodore Downs racetrack. It's for the birds and the C-128.

LAST CHANCE TO WIN FABULOUS PRIZES!—
Next month will be your last opportunity to vote for your favorites among the entertainment software released during the past year. Be sure to mark your ballot in the August issue and send it in (if you haven't already done so) to be eligible to win some fabulous software. Remember—*you* could be the winner!

AND THAT'S NOT ALL—
In addition, look for new product announcements and reviews, follow the evolution of fantasy/role-playing games, read what's on the minds of fellow Commodore computer users, and more.

SMASH! HITS!

Looking for some real action in home computer games? Excitement that'll have your heart pounding and palms sweating? Razzle dazzle graphics that'll drive you wild?

Look no further than these incredible arcade smash hits — now *faithfully* converted for your home computer by Tengen.

Speaking of smash, Blasteroids® gives a lot of space rocks a chance to do exactly that to your starship. Twist, dodge and blast away at the never-ending onslaught of asteroids and enemy ships. But one wrong move and you'll bite space dust.

When it comes to hits, nothing lets you give or take more than Vindicators.™ It puts you in charge of a hyper futuristic tank that'll blow your mind — fighting against enemy tanks and turrets that'll blow you *away*.

Get Tengen's smash hits at your favorite retailer today. And experience the best of the arcades at home!

They're available now for the C-64/128, Amiga and Atari ST.

TENGEN

WE BRING THE BEST ARCADE HITS HOME.

A CATACLYSMIC STRUGGLE BETWEEN GOOD AND EVIL

For the first time, Tolkien's panoramic vision of the cataclysmic struggle between good and evil has been skillfully crafted into a single computer war game of epic proportions.

Follow in the footsteps of Frodo, Aragorn and Gandalf as they battle to get The One Ring to the Crack of Doom. Ranged against you are all the evil forces of the Dark Lord Sauron and the corrupt wizard Saruman. The odds are overwhelming, but you cannot afford to fail. The destiny of Middle Earth hangs in the balance.

The conflict takes place on a smoothly scrolling map of Middle Earth, true to all the rich detail of Tolkien's books.

Plan your strategies, move your armies into position, and prepare for battle. At your option, you can position EACH INDIVIDUAL WARRIOR in your army in the fully animated battle sequences. Just like your favorite board games, only better because it's animated!

The special portrait gallery lets you view all the key leaders in the fray. You can examine your own forces at any time, however you must find the palantir before you can spy on the forces of evil.

Each time you play, Sauron will subtly change his war plan, challenging your strategy skills anew. Nazguls, orcs, trolls, and other evil characters deploy to give you a different test of skill in each game.

War in Middle Earth is a classic addition to any war games collection.
